But now, over a 100 million surf the web and close to 30 million netizens are crazy for online deals and discounts. Interestingly, industry estimates say that this figure grows by 1.5 million every month.

Likewise, Flipkart, India's largest online store has so far raised $31 million within five years of existence. With over 5,000 employees, the e-commerce giant aims to hit $1 billion by 2015. Last year, former eBay executive, Ambareesh Murty used a seed fund of $5 million to launch Pepperfry.com. Earlier this year, Amazon stepped into the Indian market by launching Junglee.com, which is basically a product-comparison website. Other players such as Snapdeal and Myntra have also managed to tap investors to raise a sizeable fund.

Ground reality

In light of this, it's easy to understand how from the consumer's standpoint the current state of infrastructure is perfect for the evolution of eCommerce. Internet connections are getting cheaper, broadband penetration is increasing and people's mentality towards shopping online is changing. But why this sudden boom from the business side? Quite simple: wannabe entrepreneurs have never had it so easy. To set up a website you require no more than $8 and essentially eCommerce is nothing but trading. You buy goods from one entity and sell to another. As for logistics you have existing courier services such as Aramex to tap into and for money trans-
