
```
root@Kailas:/home/kailas# fdisk -l

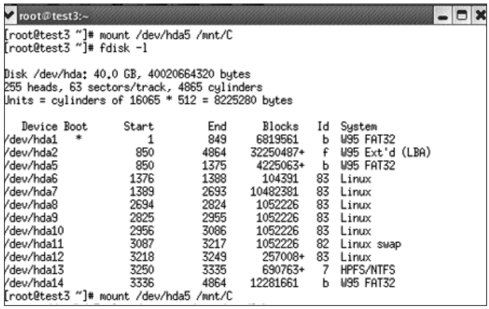
Disk /dev/hda: 40.0 GB, 40020664320 bytes
255 heads, 63 sectors/track, 4865 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes

   Device Boot      Start         End      Blocks   Id  System
/dev/hda1   *           1        4775    38355156   83  Linux
/dev/hda2            4776        4865      722925    f  W95 Ext'd (LBA)
/dev/hda5            4776        4865      722893+  82  Linux swap / Solaris
root@Kailas:/home/kailas#
```

The result of the fdisk -l command

to mount a filesystem (or, for practical purposes, a partition).

mount /dev/hda2 mnt/2 will mount hda2 partition on a directory named '2' in the "mnt" folder.



```
root@test3:~
[root@test3 ~]# mount /dev/hda5 /mnt/C
[root@test3 ~]# fdisk -l

Disk /dev/hda: 40.0 GB, 40020664320 bytes
255 heads, 63 sectors/track, 4865 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes

   Device Boot      Start         End      Blocks   Id  System
/dev/hda1   *           1         849     6819561    b  W95 FAT32
/dev/hda2             850        4864    32250487+   f  W95 Ext'd (LBA)

[root@test3 ~]# mount /dev/hda5 /mnt/C
```

The mount and fdisk commands

Again, this list is in no way exhaustive. There are several more monitoring and maintenance commands that are beyond the scope of this book.

3.2.2 Backups

As every system administrator will agree, a crash is not a question of if, but when. There are just too many things that can go wrong!

Not only in offices, but also at home, backing up is a good idea. We have already explained how to make archives using the inbuilt "tar" utility. You can either do that, or back up your important files to CD or DVD. If you are not already doing this, please start right away!

A backup is meaningless if it cannot be restored. If you are backing up data on a CD, ensure that the CD is not damaged—
