with some extreme cases that seem to emulate like gold fever and gambling withdrawals. It isn't a cake walk, especially if you don't know when to stop.

There are, however, several ways to skin a cat.

Ever since the rise in popularity of online trading, the fluctuations in the stock market have increased incredibly. Buying and selling stocks can be done in a matter of minutes, if not seconds. A good way to get a hang of the system is the CNBC hosted website called 'Money Control' *(http://dgit.in/monconvse)* which uses live data to create a stock market simulator for beginners. Basically, it's a lossless way of trying your hand at the stock market. Being a simulator, you invest imaginary money in very real companies and the simulator (over time) will tell you which of the investments were wise ones and which ones you lost money in.

The Bharat Stock Exchange website tried something similar as well, in the form of a game *(http://dgit.in/bsesmch).*

These are just two of the Stock Market simulators out there. So if you think you're not sure you have what it takes to be a big shot businessman, try your hand at the simulator before you decide to take a crack at the real thing.

A grasp of business related software

It's safe to say that any kind of professional job you would be working in would have computers involved. And where there's computers involved,

Learn trading stock in a simulator before dabbling with the real thing
