

Case Study

Cut Your Printing Costs NOW!

Organisations often ignore the printing costs they incur. But there are always ways to save money. Here's one...Outsourcing!

Aparna Krishnakumar

Do you know what really happens in your company? Employee X takes printouts on a regular basis for company correspondence. Often paper is wasted—either because a few pages get caught in the paper feeder, or when the toner runs out in the midst of a large print run, spitting out half-printed monstrosities. Then Employee X calls for help, either from in-house technical support, or external sources. Apart from the obvious wastage, there is also valuable time lost just chasing a simple printout. Now take the expenditure that Employee X has cost you, and multiply it by the number of employees in your company. Can you see the currency notes burn?

So what do you do? Why not let someone else take that headache away from you? In one word...outsource! The problem with outsourcing is that it comes across as expensive, initially. It is, but only because you need to invest a larger sum up front. In the long run, however, it's proven to be cheaper. Hey, don't take our word for it! Ask Delhi-based Northern Credit & Collection Business Private Limited (NCCB), who have saved by outsourcing their printing requirements.

"We had a win-win situation, so considering the cost, service and efficiency factor, we decided to experiment with WeP and the service it offered.

Harkishan Kohli
EDP Head, NCCB India

The Company

NCCB is a credit evaluation and credit verification services provider. In the 1980s, it was the first agency of its kind in India to set up services for collection and repo with its earliest client Citibank. Their primary task is to help in the processing and checking of forms for loan applications and credit card verifications. They also maintain defaulters lists to help various financial and multinational banks make wise investments with minimum risks. The company also undertakes collections for financial institutions and cellular operators.

The office has a staff of 180 and the place is well equipped with laptops, projectors, intercom and Internet facility to provide efficient service to its diverse clientele, ranging from MNCs, such as HSBC and ABN Amro, to nationalised banks like State Bank of India and Bank of Baroda.

The Problem

With liberalisation, the masses are talking more loans, and more banks are providing them. With a staff of 180, the company manages the increasing workload. According to Managing Director Tarun Arora, "The volume of forms handled is enormous, so we have to invest in a buying a new printer every second month." The application forms are sent to the company via the dealers. Plus, the company also processes the online forms that all credit card or cellular companies have on their Web sites. So why did printing pose a problem?

Arora clarifies, "The online application forms have to be with our field executives as well, so we need printouts. Not only this, but the respective companies need copies of the lists of people that we have verified. Often the
