A3 =PMT(B3,C3,D3)

	A	B	C	D	E
1	PMT Calculation for Loan				
2	PMT	Rate	NPER	PV	Downpayment
3	(Rs.3,277.38)	7.00%	48.00	Rs. 45,000.00	Rs. -
4	(Rs.2,685.04)	7.00%	36.00	Rs. 35,000.00	Rs. 10,000.00
5	(Rs.3,269.59)	7.00%	24.00	Rs. 37,500.00	Rs. 7,500.00
6	(Rs.3,479.44)	7.00%	18.00	Rs. 35,000.00	Rs. 10,000.00
7	(Rs.2,849.17)	7.00%	60.00	Rs. 40,000.00	Rs. 5,000.00
8	(Rs.2,807.81)	7.00%	53.00	Rs. 39,000.00	Rs. 6,000.00

Loan installment calculation using PMT

the present value or future value, you can use the PMT function to calculate the amount you will have to pay for each payment period (the instalment). For example, you can find out the instalment on a loan of Rs 45,000 where you know the interest rate (7.58%) and the number of payments to be made (48). You can reduce the down payment from PV and see how that will affect your instalment or vary the number of instalment months.

9.5 Maths & Statistical Functions

There are tons of mathematical, trigonometric, and statistical functions in Excel. You access them by clicking on the Formulas tab and selecting the functions from the Math & Trig drop-down, and the Statistical functions from the More Functions drop-down. We take a look here at some of the more common statistical functions.

ROUND(number,num_digits)
Excel takes the number argument and rounds it to the number of decimal places specified in the num_digits argument. If the num_digits argument is a positive number, then Excel rounds off the value to the specified number of digits. If the num_digits is a negative value, it rounds off the number to that many places left of the decimal point.

For example, when A1 = 2564897.5689456
