power supply (UPS) device or surge protectors.

How to repair without formatting?

If you prefer not to format a corrupted external hard drive or it becomes unallocated, there are still options to repair it. Below are two methods you can try.

Method 1. Windows Tools

If you have a problematic hard drive, there are Windows tools available that you can use to attempt to fix it. Each tool is worth a try. Follow these steps:

1. Open "This PC" and right-click on the drive that has bad sectors.
2. Choose "Properties".
3. Go to the "Tools" tab.
4. Click "Check" to check and repair the bad sectors on your hard disk.

To remove bad sectors on your hard drive without formatting it, you can use the CHKDSK command with administrator privileges. However, note that this command will erase all data on the drive, so it's important to recover data with a tool like EaseUS Data Recovery Wizard first. Here are the steps:

1. Press the Windows + R keys simultaneously, type "cmd," and hit Enter.
2. In the Command Prompt window, enter the command "chkdsk [drive letter]: /f /r /x" and hit Enter. (Replace [drive letter] with the letter of your own drive.)
3. Wait for the scan and repair process to complete.
4. If you're not comfortable with using the Command Prompt or want to minimize data risks, it's recommended to use third-party software instead. The Command Prompt can be complicated, and entering the wrong commands can cause severe problems.

To recover lost data from your external hard drive, follow these steps:

1. Ensure you are using the correct USB cable to connect the external hard drive to your computer. Launch EaseUS Data Recovery Wizard, and you should see the external disk under "External drives." The software supports all popular external disk brands such as WD, Seagate, Toshiba, LaCie, SanDisk, and Samsung, among others.
2. Select the external hard drive and click the "Scan" button to start the scanning process.
3. As the scan process progresses, EaseUS Data Recovery Wizard will display more and more lost and deleted data in the scan results. The recovered data will be neatly organized and easy to find by file type or through a search using the exact file name in the search box.
4. Preview the files found by the scanning algorithms of EaseUS Data Recovery Wizard. Select the files you want to recover and click "Recover." To avoid overwriting data, save the recovered data to a different drive than the original Seagate drive.

Method 2. Update Corrupted/Outdated Driver in Device Manager

To make an external hard drive visible, reinstalling the driver can be a necessary step, as sometimes driver issues cause hard drive problems.

To do this, follow these steps:

1. Right-click "This PC" and choose "Properties" > "Device Manager".
2. Click on "Disk drives", then right-click on the external hard drive that is not showing up in Windows and choose "Uninstall device" (be sure to select the correct USB device).
3. Click "OK" to confirm the removal in the prompt.
4. Restart your computer and reconnect the drive to the PC.
5. After the computer restarts, the driver will be automatically installed.

Method 3. Run CMD

To repair a corrupted external hard drive using Diskpart, follow these steps. Note that this process will erase all data on the drive, so it is important to recover any important data using a data recovery tool before proceeding.

1. Press the Windows key and R simultaneously to open the Run dialog box.
2. Type "cmd" in the box and press Enter to open the Command Prompt.
3. Type "diskpart" in the Command Prompt and press Enter.
4. Type "list disk" and press Enter to display a list of available disks.
5. Type "select disk X" (replace X with the number of your corrupted external hard drive) and press Enter.
6. Type "clean" and press Enter to erase all data on the selected disk.
7. Type "create partition primary" and press Enter to create a new partition on the disk.
8. Type "exit" and press Enter to exit Diskpart and finish the process.
9. Note that this process can be complex and should be performed carefully to avoid any unintended consequences.
