Read *The Principles of Economics* at the McGraw-Hill Student Learning Centre

nomic market. Individual and market demands for particular goods and services are the result of rational decisions by consumers that are interested in maximizing their total utility, or satisfaction, for a given level of spending. Prices and income play particularly important roles in determining consumption patterns, and hence demand for goods and services. Rational decision makers will change their consumption choices when prices or incomes change. The responsiveness of consumption choices to changes in prices and income is reflected in the elasticity of demand. Sellers of goods and services are particularly interested in elasticity measures, as they provide important information about how sales (and revenues) are likely to change when the price of a product changes.

8.3.3 AmosWEB—the Economics class portal

http://www.amosweb.com/cgi-bin/awb_nav.pl?s=cls&c=dsp&crs=micro

AmosWEB is an online class portal which covers micro-economics at the elementary level. Right from Economics basics to Factor markets, every topic is divided into lessons.

You can refer to the courseware which is detailed and simple. The examples refer to the economies of other countries, but will still help you they better understand concepts. Lessons are illustrated and explained well.

Excerpt

Demand

The concept of demand is fundamental to the study of the market and economics. It is the first of two sides of the market that we'll study.
