CONCLUSION

It’s clear that there can be no outright winner for all uses—your application and your budget will determine the best printer for you. If you are what we could term as the ‘average home user’, you would want to strike a balance between performance (both in terms of speed and image quality) and price. If you are a graphics professional, you can’t possibly compromise on

quality and so you wouldn’t let pricing constrain your choice.

In the performance category, the **Epson Stylus Color 880** with its faithful reproduction of fine details and colour gradations emerged the clear winner. While the printer performed well in the speed tests, it really shone in image quality prints, where the level of details and the ability to faithfully reproduce colours was

breathtaking. This was especially apparent in the photograph printout, where the details in the various sections of the photo came through brilliantly. Also, with very robust build quality and rich features, this printer is a very good choice for the demanding office user who needs the best in printing technology.

The **Canon BJC 3000**, with its commendable print quality, bagged our Best Value award as it offered good performance at a very good price point, making it an ideal choice for the home user who’s interested in printing stationary, cards etc without spending too much.

With the price for a given technology, speed, and resolution declining rapidly over the recent past, inkjet printers are now well within the reach of the home user. If you are still deliberating on the pros and cons of buying your first printer or upgrading to a new one, an evening of window shopping will help you make the decision, for you are sure to find a product that fits your requirements and your budget.📄

Epson Stylus Color 880: Good performance

Canon BJC 3000: Value for money
