

Crime Time

Karan,
I want to thank you for having brought to the fore the issues of privacy and freedom of choice with regard to Internet access and usage through your editorial in the July issue. I fully agree with you that Internet usage is one thing that needs to be promoted and encouraged rather than treated with the same callous attitude that governs services like the Indian Railways. Without an increase in penetration of the Internet in the country it will not be possible to deliver all the benefits of information technology to the common man. At present the levels of Internet usage in India is very low and the government certainly isn't helping the situation by framing laws such as these.

digit

Dear Imtiaz,

As you mentioned, the larger objective should be to promote the use of the Internet. All other signs seem to indicate that the government is attempting to do its part to spread the benefits of technology.

Hence this particular move makes even less sense. Cyber crime is an important issue and needs to be tackled but the approach being adopted seems to be excessively heavy-handed.

Mobile Mania

Karan,
I read the article about mobile phones in the June 2001 issue, and have made a sketch on the recent slashing of mobile phone prices.

PRATEEK CHAKRABORTY

digit

Dear Prateek

Just an aside. Do they use mobile phones for 'Phone-a-friend' in our national programme, Kaun Banega Crorepati?

Goof Ups

- No guys, you are not lucky! Rashi Peripherals is not selling the Logitech Cordless Mouseman wheel at Rs 480 as printed in the A-List. The actual cost is Rs 4,500.
- Don't always be so positive is what Prashant Parikh seems to be pointing out as we have rated the 'Poor performer' Biostar motherboard as positive (+) instead of negative (-) in Radar, July issue.

Notice any goof-ups? Write to goof@jasubhai.com

Short Bytes

We dig it

Dear Karan,
I recently visited the IRC chat servers and registered a new channel and named it #digit. This channel is dedicated to technology discussion and I hope it rocks with new topics of discussion.

Back to the 'sticking' boards

I think you really have to do something about sticking the Digit CDs to the card paper. Some portion of the backside of the CD cover gets torn and looks like someone has ripped it off from the card paper. Every time when we buy the magazine there is a task ahead of us to pull the CD cover very gently. Instead of sticking the backside of the CD cover you could use an extra flap of card paper that will act as a connection between the CD Cover and the card paper. You could stick one end of it to the CD cover and the other end to the cardboard. Then, we can rip off that flap from the cardboard keeping the CD cover safe and clean. We could even cut out the flap from the CD cover.

Programming loop

Firstly, you could start a regular section for programmers even though you have released a new magazine. Secondly, you could start another regular section that will deal with how the computer works. For example what happens when I cut/copy and paste something or how the various hardware devices work or on emerging technologies such as Bluetooth.

Be Indian, buy Indian

Previously, there used to be a small Indian flag on the front cover of the magazine, but this symbol has been removed from the new Digit cover. Digit, therefore, seems a foreign name. Get the flag back in the next issue of Digit.
