

Chic-tronics

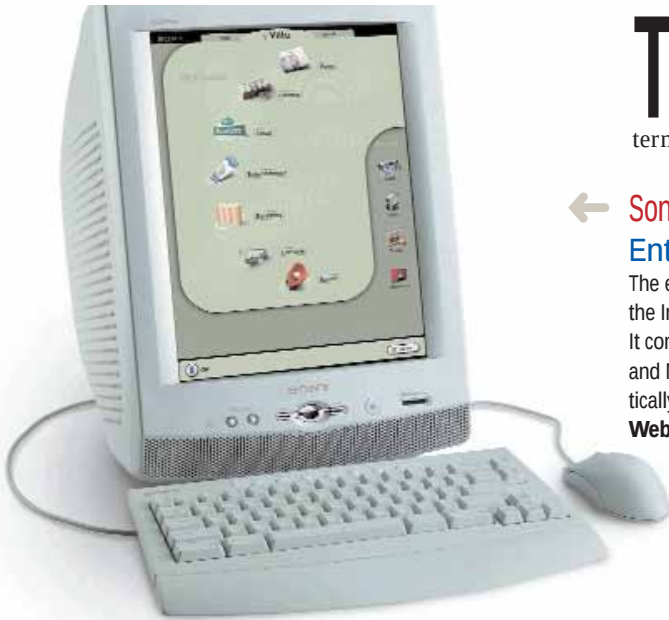

This month's selection of objects worth dying for, range from a stunner of a music system to a mobile device that takes the term 'multi-tasking' to a different

level altogether. So even if you think they are a little out of reach, there's nothing to stop you from drinking in the sights and drooling over them.

← Sony eVilla Entertainment Centre

The eVilla is Sony's network entertainment device, designed specifically to surf the Internet. It is based on the BeIA operating system and is multimedia-ready. It comes with convenient preset channels that let you listen to Internet radio and MP3s. The eVilla has a 15-inch monitor with the longer sides oriented vertically, rather than horizontally as in most computers.

Sony Aibo ERS-210 ↓ Aibo Planet

Welcome to the world of robot pets. The current generation Aibo (the ERS-210) is an upgrade to the ERS-110, which captured the imagination of pet-loving enthusiasts a couple of years ago. The new version comes with 32 MB memory, a 64-bit RISC processor, and new voice-recognition capabilities. It can dance and talk, but also has a digital camera built into its nose.

↑ Frontier Labs NEX II 64MB Looks don't Matter

This USB-based MP3 player is way ahead of its competitors. The sound quality and fast file-transfer times are sufficient reasons to go for the NEX II. It has been designed to overcome the limited memory available with Flash media. It also supports multiple storage formats,
