

MP3 Download Sites and Software

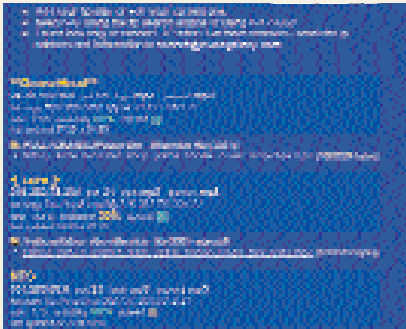

There are many sites that allow you to search for MP3s and download them. Let's take a look at how you work with Audiogalaxy Satellite and Napster

Searching without ratio in Audiogalaxy

A good idea while searching for titles in Audiogalaxy is to use the No ratios option. This ensures that you do not have to barter files or sign-up or pay some amount in exchange for the files that you require. A problem however is that many sites change their ratio options quite often and Audiogalaxy may not be fully updated on that.

Connecting to sites in Audiogalaxy

When connecting to a site that has one of the files you want, take care while you are

FTP sites allow you to barter music

pasting information about the site to your FTP client.

Many a times you will find that anonymous login doesn't work (the username and password might be set to 'mp3') and that the FTP port might also not be 21. If you are having problems connecting, increase the retry attempts in your FTP client and also decrease the time between retries.

Increasing the number of concurrent downloads in Napster

If you have a high-speed Internet con-

nection, then you can go ahead and experiment with downloading multiple files at the same time without facing any bandwidth problem (at your end at least). To do this, go to Edit > Preferences and click on the Transfers tab.

Then in the Downloads options, check out the Maximum Simultaneous Inbound Transfer option and specify a higher number there. If you are in a chivalrous mood, you can also increase the number of users who can simultaneously access your machine and download songs. Click on Save to preserve the settings.

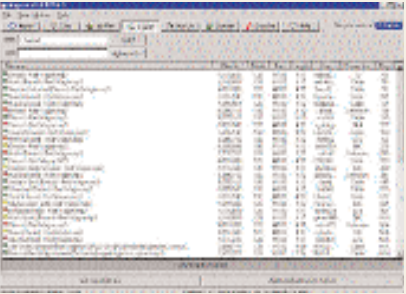

Smarter searches with Napster

If you are looking for a specific quality of MP3s and want to download from specific speeds, it helps to narrow down your search criteria. The Advanced Search Option allows you to do precisely that.

In the bitrate option you can specify the minimum bitrate that the MP3 file should be. Select 128 Kbps normally as that's the most commonly used one and gives the best mix of file size and audio quality.

You can specify the frequency settings, but most likely all files are encoded at 44.1 KHz.

If you want to download from a high-speed line you can specify the settings in the line speed option. You can specify the minimum line speed and selecting a faster line speed such as a T1 line is better.

The Advanced Tab allows many different search options

Portable MP3 Players

Enhance the usability of your portable MP3 player

Conserving battery in Creative Nomad II

Just as the PC has power management functions, even the Nomad II comes with some power settings. For instance, the Nomad II has an automatic Power Off function by which it shuts itself off to conserve battery if the player is idle for more than three minutes. You can change this default setting of three minutes based on your usage pattern. To do that, go to Settings from the Main menu and scroll to Power Off and select the option. Using the Volume Up/Down or the Forward/Reverse keys, increase or decrease the time before the player will automatically shut off. Once you are done, press Play to save the settings.

You can use power management even for shutting off the Radio mode. Go to the same menu and instead select the FM Sleep option, and then using the Volume Up/Down keys (similar to the player) change the setting to whatever you desire.

Adjusting playback speed in Nomad II MG

If you have recorded some voice in MP3, you can adjust the playback speed since the Nomad II MG uses the EAX time-scaling technology. To do this, press and hold the Repeat/EAX button. You will get to see 'Time-Scaling 1.00x' on the LCD screen. Use the Volume + or Volume - keys to increase or decrease the playback speed.

Preserving batteries in Diamond Rio 300

Since the Diamond Rio 300 doesn't have an On/Off switch, there isn't an actual power-down, rather the player goes off to a sleep mode. Even this sleep mode uses a bit of battery power, so in case you are not going to use the player for some time, it is preferable to remove the batteries.
