

Tips & Tricks for Sound

- To get the best sound,**
- The listener and the speakers should form a triangle; without this basic setup you'll never hear good sound staging and imaging.
 - The nearer the subwoofers (speakers that produce the low frequency sounds) or the woofers are to walls and corners, the better the bass.
 - Listening height affects the overall tonal balance of the speakers. Speakers should be at the same height as your ears.
 - Angling the speakers towards the listener affects the tonal balances too, particularly the amount of treble and the vocals.
 - The best way of using stereo speakers is by maximising the distance between the two speakers. The greater the distance between the two speakers, better is the stereo effect.

Live Surround with Creative Cambridge DTT2500

Value environment with Jetway Artis surround

True performance with Typhoon Silver Crest

Samsung SMS 8320 provides Best Value

CONCLUSION

There was a good deal of competition in the two-speaker set segment as compared to the surround speaker segment. In the stereo section, the speaker set that displayed the best performance was the **Typhoon Silver Crest SC600**. This pair, equipped with its well-toned subwoofer, outshone all its competitors.

However, its price, at Rs 8,900, will leave you with second thoughts. In fact, at this price, you can easily buy four Frontech 5D-103 speaker sets!

In the two-speaker setup the value for money award goes to the **Samsung SMS 8320**. Priced at Rs 2,000, it wins over the Creative PC works 2.1 that is priced at Rs 3,500.

In the surround sound section, the overall winner was the **Creative Cambridge DTT2500**. Following closely at its heels was the Logitech Xtrusio DSR100. But the DTT2500 had the advantage of having a separate digital decoder and with its sheer power and quality of sound delivered, it carted away the award for the best surround system around.

The value for money set would definitely be the **Jetway Artis** that, along with power under its hood, also delivers acceptable quality at a price that will not burn a hole in your pocket if you are looking out for a surround sound solution for your home. ■
