"We believe that this order is at odds with the appeals court ruling in February and threatens all peer-to-peer file sharing"

Hank Barry, CEO, Napster on the court order restraining Napster's file-sharing services

Let's see if there's a way to get the free goodies back

I'll kill for net access

Sounds too far fetched? A university student was recently arrested in Bangkok for killing a young woman. He wanted the money for paying off an Internet café debt.

The culprit is 22-year-old Witchapat Permjaruras, a computer science student at Ramkhamhaeng University. He killed 28-year old Patcharin Nanammuang for settling a 2,000 baht debt that he owed in a cyber café.

On December 14, 2000 he broke into the young woman's apartment. While looking for money and valuables, the woman woke up and tried to resist him. In the struggle that followed, he stabbed her, resulting in her death. It took nearly six months before the police could catch him. The police got on to his tracks from his blood stained clothes and the footprints he had left behind in the apartment.

Addictions, even cyber addictions are dangerous affairs, you see!

Embedded notes

Hitachi has developed an unbreakable chip thinner than a strand of hair, making it possible to be embedded in paper.

Data stored on the chip can be accessed using a device similar to a bar code reader. This capability to store identification numbers enables its use for the protection of currency notes, cheques and other important documents against counterfeit and illegal copies. It can also be used for tracking sales and market research.
