

irthday plans

Dear Sir,
I was very surprised on seeing the April issue. You've always celebrated your birthday by giving away something special with your birthday issue. Why not this year? Although Digit did not turn four, you should celebrate four years of hard work!

Shishir
Bangalore

Dear Shishir,
April was not Digit's birthday. June will mark our first anniversary and you can rest assured that there are some exciting offers planned for this occasion. (Hint: Search this issue for the scoop on our Anniversary issue plans.)

ixing delays

Dear Digit,
I am a regular reader of Digit since the last two-and-a-half years and have always obtained my copy from the newsstand. However, for the last few months the magazine arrives by the 3rd or the 4th of the month. Why is this so? Earlier the magazine was always out by the 1st. Is this due to complaints from subscribers regarding the early availability of the magazine at the newsstand?

Ritesh Joshi,
Via e-mail

Dear Ritesh,
We're not playing favourites. All our readers—subscribers and newsstand buyers—are equally important to us. The magazine has been arriving later than usual due to delays at our end. We're aware of this problem and are working to fix this.

A sticky problem

Hi,
In your reply to Donald's letter about the list of CD contents (March 2002), you'd talked about the contents being listed on the back of the CD pouches. But these pouches are pasted on to the packaging cardboard in such a manner that when we pull them off a thin layer of paper is also torn off and hence a part of the printed matter is lost. This can be solved if the pasting is done at the edges of the pouches.

Ashok Sharma
Coimbatore

Dear Ashok,
That's an excellent suggestion! I've spoken to our production department about being more careful while pasting the CDs and they'll implement this, starting with this issue itself.

Missing the A-List

Hello Digit,
I am a subscriber of Digit and sorely miss the price list that was a regular feature in the previous issues. The A-List gave me the current prices for the best hardware and software products in the market. I don't understand why it has not been appearing since the last few months. I hope that it makes a comeback from the next issue.

Ramnan
Via e-mail

Dear Ramnan,
We've received a number of similar mails on the A-List, which was dropped from the magazine starting January 2002. We would love to hear from all our readers whether the A-List should be reinstated within the magazine. Visit www.thinkdigit.com and participate in our first online poll to decide the fate of the A-List.

humbs down for Linux?

Dear Digit,
The last three issues of Digit have been Collector's Editions. You have truly changed for the better! The main reason is because of your shift away from topics like PDAs and Linux. Granted that they are here to stay, but from an Indian perspective, both of them are practically useless. Linux is the most cumbersome OS for every non-geek out there. Nothing beats the functionality of Windows, particularly XP, which simply blows the competition away. And we all know that Digit is not a 'for geeks only' magazine. I simply don't get the logic in using something that is so difficult to learn, all in the name of being independent of the Redmond giant.

Avinash Jayaprakash,
Thrissur, Kerala

Dear Avinash,
While we gladly accept your praise, there's been no change of heart from our side on Linux. In fact, the last three issues have featured some story or another on Linux. Sure it's not as simple to use as Windows, but in a country like ours, where most consumers equate software with being free (read pirated), a truly free operating system that can take on the might of the Redmond giant is a boon. By the way, do you have a licence for your copy of Windows XP?

digit

Go graphics!

Hi,
I always wanted software that could help me in choosing the right PC and the April issue answered my prayers with its collection of benchmarking and diagnostic tools. But I was very disappointed that the graphics card test was dropped as I was eagerly looking forward to it. Please make sure you include it in your next issue.

Anuj Sahai
Via e-mail

Dear Anuj,
We had every intention of carrying the graphics card test in our April issue. However, the release of Nvidia's latest, fastest and baddest wonder card, the GeForce4, put us in a spot. Added to this was the fact that other notable cards like the Radeon 8500 have still not made an entry into the Indian market. After much soul searching we decided that it wouldn't be fair for us to do a comparison test without considering these stars of graphics technology.
