

Xybernaut poma

Wired to go places

The poma is a small wearable computer with a head-mounted display (640x480 max resolution), which provides an experience similar to viewing a monitor from 2 feet away. It's powered by a 128 MHz RISC processor with 32 MB each of RAM and ROM, a CompactFlash slot and a single USB port and can be used with keyboards and other devices like an MP3 player.

small is Beautiful

From palm-sized MP3 players to wearable computers, the latest mantra in digital technology involves shrinking everything in sight

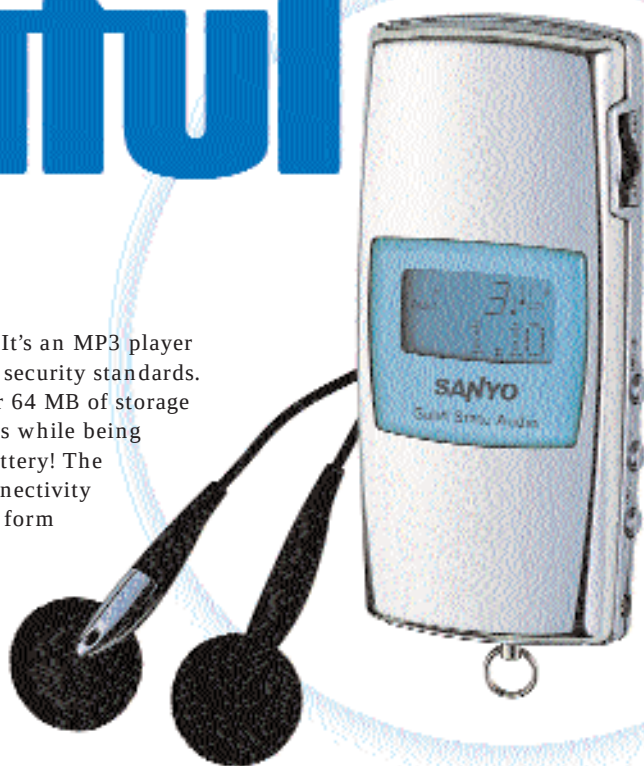

Sanyo SSP-PD7 ►►

Light listening

No, this is not a cell phone. It's an MP3 player that supports SDMI and SP3 security standards. The SSP-PD7 offers 32 MB or 64 MB of storage space using MultiMediaCards while being powered by just one AAA battery! The USB port facilitates easy connectivity to a PC. With an ultra small form factor, this little device is as unobtrusive and portable as audio gets!
