

Decision Maker			
	Bare Necessity Seeker	Computer Enthusiast	Performance Seeker
You need	Basic support for current processors and peripherals	Flexibility and upgradeability	Maximum performance and overclockability
Look for	Minimum 3 PCI slots with integrated sound and video in the Micro-ATX format	Minimum 5 PCI slots, 3 RAM slots, AGP 4x slot, ATX format, USB 2.0 support	Latest chipset, easy option for overclocking, stability when over-clocked, 6-channel audio support, RAID 0 and 1
Our recommendation	Pentium III/Celeron ASUS TUWE-M, Mercury KOB810ETFSX, Athlon XP/Duron Krypton M7VKS Pentium 4 ASUS P4B, Mercury KOB845NFSX	Athlon XP/Duron MSI K7T266 Pro2, DFI AM75-TC, Soltek SL-75DRV4 Pentium 4 ASUS P4B266, MSI 845 Ultra-C	Athlon XP/Duron ASUS A7V266-E, MSI KT3 Ultra-ARU, ASUS A7N266-E Pentium 4 Gigabyte GA-8ITXE, Intel D850MD
Price range	Rs 3,500 - 5,500	Rs 5,500 - 10,000	Up to Rs 16,000

ASUS TUSL2-M: The ultimate performer for Pentium III processors

Content Creation Winstone 2001 with 47.5 points.

Despite being a Micro-ATX board, it still features an AGP slot — something we sorely missed on the 810E2 solutions. The three PC133 SDRAM DIMM slots support a maximum of 512 MB. The board also supports a smart card reader and has four USB ports.

Our Verdict: This board is an excellent platform for the Tualatin range of Pentium III processors.

ASUS TUWE-M
The layout of the TUWE-M is exactly the same as the TUSL2-M except that it uses the 810E2 chipset. This is a new revision

ASUS TUWE-M: Very robust performance at an affordable price

to the 810 series with support for the latest Pentium III and Celeron (Tualatin) processors. This board scored 26328 in SiSoft Sandra 2002 Drive Index, making it one of the fastest in its category.

The board does not have an AGP slot and you cannot improve its graphics performance by plugging in a faster AGP card. It comes with three PCI slots and features onboard audio. As it uses the Micro-ATX form factor, its upgrade path is limited, but its small size makes for very easy installation.

Our Verdict: This board is a good buy for those looking to build a low-cost Celeron system.
