

HP 948c Inkjet Printer

Warm up to this one

The HP 948c comes with a built-in 2 MB buffer, which facilitates easy and fast printing of large files, especially images and large PDF documents. It has a space-saving

foldable paper tray and comes with both USB 1.1 and a parallel interface. The printer can churn out a maximum of 12 A4 sheets of text in a minute. However, the printer has a relatively high initial warm up time (18.31 seconds). To print the test image on plain paper (colour printout), the printer took 3 minutes 26 seconds—fairly acceptable. The printer took about 3 minutes 20 seconds to print the same image in grayscale, which is just 6 seconds faster than the

colour printout test. It took a little over a minute and 30 seconds to print the test PDF document (36 MB), which is pretty fast. Once the initial warm up is done with, the printer doesn't waste any more time warming up for subsequent printouts.

It is capable of printing at a resolution of 2400x1200 dpi and supports HP's ColorSmart3, which optimises photographs, text and other graphics by adjusting the colour settings. The printer has some nifty buttons on the front panel—a resume button, a button to cancel the print and a power button. This printer is targeted mainly at home and small office users who are looking for a high quality inkjet printer and don't have demanding and continuous printing jobs.

Saitek R100 is a good and inexpensive steering wheel with decent build quality, but there's no force feedback!

Saitek R100

Not one for the aficionado

This steering wheel from Saitek fits neatly onto the desk and the clamping mechanism is strong enough to sustain severe jerks. But disappointingly enough, the friction pads provided for the pedals are not effective enough to hold them in one place. The pedals can easily move out of range and even the pedal placement is too close for comfortable use. The buttons are easy to configure and their placement is fairly comfortable.

The price tag of the wheel is an affordable Rs 2,250, which makes it attractive for most users who are looking for an inexpensive and fairly decent steering wheel. The build quality is quite acceptable and the pedals are strong

enough to sustain regular punishment, albeit being a bit noisy. The wheel comes with a manual, which carries detailed information about calibration

and a few FAQs for troubleshooting. The R100 requires no drivers and is detected without any trouble.

The Saitek R100 is ideal for the occasional gamer, someone who is not interested in spending a lot for a force feedback steering wheel as this is a very basic solution. The hardcore racing game fans will have to look elsewhere.

Millennium Accountant

For accounting newbies

This accounting package designed in MS Access is easy and simple to use. The software comes with an intuitive interface and even has a security system allowing only authenticated users to use the application. It has templates of master accounts for Chartered Accountants, manufacturing units, traders and home managers. Users can create their own templates too. It gives users an option for inventory management as well as sales and purchase order management and can even generate a payroll report. What the package lacks is an effective reporting suite—it provides only the

basic profit and loss, balance sheet and MIS reports. This application also has a built-in utility for Web browsing as well as for data backup and restore (on any desired location). It gives users the option of repairing data through a
