## Samsung Crystal Optical Mouse

The future is in your palm

This mouse has rather futuristic looks. It has a transparent body, which itself acts as a unified right and left-click button—tilt the body towards the left and it left-clicks, tilt it to the right and it right-clicks. The scroll button glows with a blue light.

The mouse is bundled with the Crystal Optical Mouse software utility, which lets the user configure the mouse and scroll button as per requirements. Since it's an optical mouse, it can be used on any surface—on your leg, over wood or any kind of fabric. The mouse sends as many as 1,500 signals per second to the digital signal processor, which makes for precise movements onscreen.

The mouse is definitely not suited for gaming, especially in first person shooter games because of the absence of two unique left and right-

click buttons. As the entire body acts as a unified button, the gamer will be unable to use two buttons simultaneously, which is unacceptable. There is no finger rest (the depression usually provided on the button) that could have made clicking easier. Due to this, you end up moving your entire palm while clicking. The mouse is available with a PS2 interface and is detected automatically.

## Olivetti Artjet 22

Not much of a performer

The Olivetti Artjet can be placed both horizontally and vertically. It can print test envelopes too, but they have to

be placed in the output tray. It comes bundled with the Micrografx Windows Draw 6 graphics suite and Micrografx Picture

Publisher. It has a power supply and comes with a parallel printer cord (no USB cable). Also bundled are five sheets of coated paper and a single black and white and colour cartridge. When tested for document printing (text) in black and white mode, it printed four pages in a minute. It took 5 seconds to warm up before picking up the paper. The Artjet 22 took 53.28 seconds to print a test PDF document under default settings but in the high-

## G-Lock EasyMail

The mailman's here

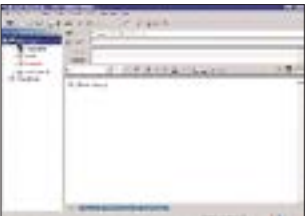

This 2.5 MB mail client has options for merging fields in the mail, similar to MS Word's Mail Merge. It is easy to install and setup and could very well replace any of the bundled or existing e-mail clients that you might be using. The tabs provided at the bottom let you view either the source, html preview or text preview of any mail that is being worked on currently. However, this application does not have any 'cc' field. It has two different views, namely, Message Control and Send Manager for Incoming and Outgoing mail—this can create some confusion initially among new users. The database import and export feature is a point in its favour—it can

**Price:** \$39.95 (approximately Rs 1,960)  
**Web site:** www.glocksoft.com

quality mode, it took a whopping 6 minutes and 35 seconds! The PDF document showed minor smudging and the white coloured fonts (point size 10 and below) on a black background were unreadable. The printer was unable to print that part accurately in both default and high quality settings. In the colour reproduction test, the test picture looked washed out. The printer is best for users who go with the default settings for most of their printing and only need to print high-quality colour documents occasionally.

**SPECIFICATIONS**  
USB 2.0 and parallel interface, 1200x1200 dpi output in black and white and colour, Windows 3.11/95/98/2000, 13 pages per minute in black and white mode
