

### Chiming at change

WallMaster has an option that allows you to play a sound while a wallpaper changes at the specified interval.

To enable sounds, right-click the WallMaster icon in the system tray, choose 'WallMaster control panel' and click on the 'Options' button. In the window that pops up, select the 'General' tab, and click on the 'Play sound when wallpaper changes' checkbox.

Below the checkbox is a text area where you can key

in the location of the WAV file to be played when the wallpaper changes. Alternately, you can browse to select the WAV file you want to play.

## STARTUP/SHUTDOWN SCREENS WITH A ZING

**Weary to the bones with that same dreary 'default' Windows look? Change it now! Use Startup/Shutdown screen randomisers**

### 1st Impression

*1st Impression is easy to install and configure and has plenty of preset images which can be used as logos. It also allows you to convert images into a logo format for*

*use as a startup/shutdown screen*

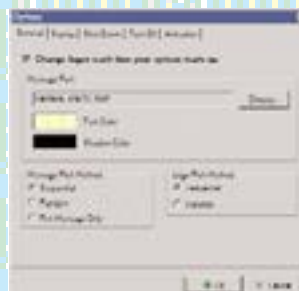

### Add your own images

With 1st Impression, you can choose any image as a logo for the three screens: startup,

standby and shutdown. To add your own image to the gallery, press [A] or click on the '+ Add' icon on the menu bar. This opens a browser window. Navigate to the images you want and click on 'Open' to add them to the gallery. When the images are added to the gallery they are toned down to suit the logo format, so don't panic if they appear a little dithered. Next, click on 'Set icon' in the menu bar. In the window that pops up, choose whether you want to set the selected image as startup, standby or shutdown screen.

### Randomising

You can easily configure 1st Impression to randomise

Enabling screen randomisation

or cycle the startup/shutdown screens. In the main window, choose **Tools > Options/Messages**. Then click the 'General' tab, and click on 'Change logo each time your system starts up' checkbox. The startup/shutdown screen cycling is now enabled. To set the mode for cycling the image as sequential or random, under the 'General' tab, click on 'Logo Pick Method'. By default,

'Sequential' is selected. If you prefer a 'Random' order, choose that option from the group.

### Adding smart lines

If you want to add quotes or snappy lines to your startup/shutdown screens, 1st Impression has a default collection of one-liners for all three screens.

Choose **Tools > Options/Messages** from the menu. In the window that opens, select the 'Startup', 'Shutdown' or 'Turnoff' tab to see the text collection for that screen. To display any of these lines on your startup/shutdown screen, ensure that the check boxes on the relevant tabs are selected. You cannot change any of the text listed in this window. For text cycling, choose 'Sequential' or 'Random' under the 'General' tab. You can also set the text colour, font and size from the 'General' tab.

### Adding more text to quotes

If you want to add more text to these screens you can do so from within 1st Impression. Navigate to the directory of 1st Impression within Program files. The default directory would be 'C:\Program Files\1stImpression-2.4.1'. Here you will find three text files with 'msg' as the prefix—they are the collection of quotes. If you want to change the text, open the files and add your text to the files, but remember to stick to the format in which text
