

extra menu by the name 'Skins' to the display properties window. You can invoke WindowBlinds from here. This is an easy-to-use software and boasts a special feature, which prevents shell replacement crashes

Stopping crashes

Not all applications will

Software exception list

accept shell replacements—those that cannot accept shell replacements will crash WindowBlinds. To prevent such crashes, right-click on the desktop and click on 'Properties'.

In the 'Display Properties' window that comes up, click on the 'Skins' tab and then click on the WindowBlinds button. This opens the WindowBlinds advanced config-

uration window. Click on 'Per application' from the list on the left and then click on the 'Add per application settings' button.

Here, select the application on which you don't want WindowBlinds skins to be applied. After you select an application, you will be shown a configuration window in which you can set WindowBlinds not to skin that particular application.

Changing a skin

Right-click on the desktop and choose 'Properties' from the menu. In the 'Display Properties' window, click on the 'Skins' tab and select a skin of your choice from the list.

The preview window shows thumbnails of the skins to help you make a choice. Click 'OK' to apply the skin. This will automatically change all the menus, submenus and other visual interface components to the skin design specifications.

Warning: Configuring themes

It is best to go with default options and not configure the themes.

The interface is complex and has too many options to set. If you go wrong at even a single point, you could end up

messing up the entire theme you are configuring. In case you feel adventurous, go ahead with the tweaking. Just remember to reinstall the software in case anything goes wrong.

VIRTUAL DESKTOPS

Virtual desktops extend your monitor's work area and group similar applications in separate virtual desktops

Cool Desk

This software allows you to create up to nine virtual desktop screens, each with a different wallpaper and sets of icons

How many virtual desktops?

Right-click the Cool Desk icon in the system tray to launch the software. Click on the 'Settings' option to open the configuration window. Here you can set the number of virtual desktops you require.

Using custom screens

To differentiate between screens, choose different wallpapers (or background colours) for each. Similarly, you can have customised icons for each virtual desktop—this allows for better

organisation. You can add customised icons by clicking on the 'More' tab in the main window.

Toggling between screens

Press [Ctrl] + [Num +] or [Ctrl] + [Num -] to cycle through the screens sequentially. To shift randomly between screens, press [Ctrl] + [Alt] + screen number.

Moving active windows to different virtual screens

To move an active window to a screen, click on that window and drag it to the appropriate virtual screen listed in the 'Desktops Manager'. Or press [Ctrl] + [Shift] + screen number. This will shift the window that's open to the appropriate 'screen number'.
