There are tools available to recover lost data, whether it's files you deleted or a formatted or corrupt partition

Turn to page 101 to see how you can recover lost files

DATA

What is the single most important thing you have on your computer? Plans for the new venture? Your company's profit projections for the coming year? E-mail from clients and friends? The address book? The travel journals you've been maintaining? Your contacts list? An electronic greeting card from your best friend?

Failed hardware can be replaced and software reinstalled, but the loss of data hurts the most. Even something as simple as an address book would take the better part of the day to key in again and that's assuming you still have an address list to key it in from. This is where backups come handy—they are your insurance in case of a data disaster.

Let's run through the common causes of data loss, what you can do to prevent it and ways of recovering lost data where possible.
