

An all-in-one solution

It offers you a printer-cum-fax machine-cum-copier-cum-scanner. The Bubble Jet printer offers a resolution of 2400x1200 dpi, allowing for sharp text and photo-quality colour prints. It printed a black and white document with 10 per cent text coverage at

The printer has one black and three separate colour cartridges, so you can replace just the cartridge that runs out, thus saving on ink and money. The colour cartridges cost approximately Rs 600 each and the black cartridge costs Rs 800. The cost of printing a black and white document is approximately Re 1, and approximately Rs 2.75 for a colour print.

The device uses its scanning technology for the copier function too. It took 45 seconds to make a copy of a black and white document; there is an option for colour copies also. However, using the machine as a copier is an expensive proposition—the cost of copying in black and white mode comes to Re 1 (the market rate is 50 paise), while a colour copy would cost Rs 2.75 (which is cheaper than the market rate).

The device supports both USB and parallel ports to connect to a computer, but you don't need a computer interface for paper faxing or for making copies of documents. An LCD display shows the machine status as well as error messages such as paper jam, empty cartridge, etc.

Printer, fax, scanner and copier; USB and parallel interfaces; no need of PC for copying and faxing; colour copying; internal mailbox to store incoming faxes; separate cyan, magenta and yellow cartridges for maximum cartridge efficiency
