

You can also rename, move, or delete the file, by accessing the options when you right-click on the file.

The library comes with a powerful search feature too. To access the search feature, click on the Media Library in the main window. In the search text pane, you can enter in the search string. The really cool thing about its search feature is that you can search using just about any criteria, including the usual artist and album, and year searches. For offbeat searches, you can search by comment, bit rate, the last played songs, the playlists, and also search giving the file types option.

📁 Playlists and Smartlists

Create custom playlists by right-clicking on Playlists on the left pane of the main window, and select Add Playlist, or go to *Edit > Add Playlist*.

Making a Smartlist

Once you have created the playlist, you can fill it up with your favourite songs. You can drag and drop the media files from Explorer. To do so from Media Library, select the songs or the criteria that you want to import. Right-click on it, head to *Send To > Playlist* and select the playlist that you have created. You can even do this from the Playing Now list.

Smartlists are better than Playlists—you can embed special rules within them using select keywords. For example, if you want to make a selection of songs by one particular artiste for a time limit of sixty minutes,

enter *'artist=Offspring'* and *'~t=60'* in the search pane. Here *~t* limits the playtime to 't' minutes. Typing in *'doors'* and *'jim morrison'* will create a smartlist that narrows down the results to The Doors and Jim Morrison. You can create any number of such smartlists based on numerous criteria that you can define.

📁 Party mode lockup

Media Jukebox is perfect for creating party playlists where you would like to have your guests browse the playlists and have non-destructive access to the files. To access the party mode, go to View and select Party Mode. You

will be prompted for a password. In the party mode, the more advanced disk and file features (such as deleting) are protected. You will need to use the password to switch back to the normal mode.

📁 Movies on the Jukebox

Media Jukebox can also play your favourite videos and movies. With support for the DivX, QuickTime and Real formats, this is a versatile video player. To play media files in the QuickTime and Real formats, you will need to have the QuickTime and Real players installed separately. To play DivX videos, you will need to have the DivX codec bundle installed.

MUSICMATCH JUKEBOX 8

In the age of all-in-one complete players and jukeboxes comes MusicMatch Jukebox. The all-new Version 8 of MusicMatch Jukebox has slick, colourful skinnable interface, increased Super Tagging features, as well as unique visualization features

📁 Recorder quality settings

You can set in your own personal file quality preferences in MusicMatch Jukebox. To

do so, go to *Options > Settings* and click on the Recorder tab. You can set file encoding quality here, for all the supported formats. MusicMatch

Some common Smartlist keywords

Keyword	Usage Example
artist=	ar="jim morrison"
album=	al="morrison hotel"
name=	name="blue sunday"
numberplays=	numberplays=10 (returns all files played 10 times)
bitrate=	bitrate=256 (returns all files with bitrate equal to 256 kbps)
~a	~a blue sunday (get full album containing this song)
~s	~s 700 (limited to 700 MB size)
~t	~t 60 (Time limited to 60 mins)
~n	~n 25 (limited to 25 tracks)

Notebooks, Hand Helds, Cameras, SMS
