

Kodak CX6330

Picture perfect, wallet-friendly

The CX6330, the younger sibling of the Kodak DX6340, is targeted at budget buyers. In fact, it is the cheapest offering in its class, and sports some features that are great for its price. For instance, it sports a 3.1 mega pixel CCD that can deliver 2032 x 1524 resolution images. The 3X optical and the 3.3X digital zoom take care of different types of photography. Be it in macro mode, or landscape mode—you are assured of capturing the subject flawlessly. The 13 to 70 cm macro mode allows you to take snaps of subjects as small as a needle, with-

out losing focus or colour. It has all the features of a low-end camera, such as exposure compensation from +/- 2.0 EV, burst mode and colour mode (black and white, sepia and colour). The CX6330 runs on two AA batteries that are bundled with it. The camera weighs just 175 gms, which makes it light, and easy to carry around. It also offers better ergonomics, which means that you will not have to sit and spend hours learning how to navigate the menu, and finding your way around the buttons. The camera brings along an in-built memory of 16 MB memory, with support for SD/MMC card. The images are saved in the compressed JPEG format, meaning that you can easily store up to 15 images at maximum mode, and more than 25 images at lower settings.

When it came to performance, the device delivered acceptable image quality. The colour reproduction was much better than its more expensive counterparts. The specular effects were also very smooth and pleasing to the eye. The focus, however, was a little off target, and therefore not all parts of the frame were clear. This is one shortcoming that can be overlooked if the CX6330 is to be used for general purpose image capturing. The camera delivered disappointing results in the RGB test, where both the colours, green and blue, were not captured properly. These two regions appeared very dark, indicating that you can only shoot subjects standing within flash range.

The camera's 3X optical and 3.3X digital zoom is also commendable, as it will not disappoint those who usually like to capture distant objects, mostly outdoors. When tested for the actual person test, the camera gave a fairly decent image quality, with better white balance results and proper colour reproduction.

The CX6330 is priced at just Rs 16,900, which is quite reasonable for the kind of lens, feature and performance it packs into it. CX6330, like DX6340, is compatible with Printer dock EasyShare 6000. As far as features and performance goes, CX6330 is the best camera money can buy.

Kodak DX6340

Snap 'n' save

The 3.1 megapixel Kodak DX6340 is great in performance, and intelligently priced. It can deliver a resolution of 2032 X 1524. It sports a Schneider 4X optical zoom and 3.5X digital zoom lens, which is more than enough for most types of photography. It also has a good list of features. The 10 to 60 cms macro mode range allows you to capture subjects with vivid colours and clear focusing. The camera has multiple picture modes such as shutter priority, aperture priority, sport, night, and so on. Novices can just select the mode according to their need and click, making it a simple point-and-shoot camera. At maximum settings, the image size is lower than 1 MB, unlike other cameras. This is particularly good for a camera that has a built-in memory of 16 MB, and no additional storage media bundled. However, it supports the SD/MMC card to increase the storage capacity.

The Kodak DX6340 is light and easy on the hand—the buttons are placed within reach. The camera's hot-button transfers the image directly to the PC, which speeds up the process. It is compatible with the EasyShare Printer Dock 6000, which can print images from the camera directly.

The Kodak DX6340 delivered some of the best results in its class. The test image was very clear with no dark or bright spots. The colours were reproduced accurately—especially the pink and yellow. The wrinkle on the cloth was also picked up in detail, displaying the lens' prowess. The image was well-focused, thus giving the much-needed depth. However, it failed to detect the fine lace of the curtain in the detail test. In the zoom test, it picked up the fine roots on the tree at a distance of 12 to 15 feet. It also managed to deliver much better pictures than the rest in the actual person test. The white colour of the background image was picked up accurately, hence proving that camera sets the white balance precisely. The same was the case with the overall luminance and colour reproduction.

Smartly priced at Rs 20,900, it is the cheapest model in its class. With so many features and a good image-quality, the Kodak DX6340 should be the choice of users across the board.

"Is fast, cheap, with built-in memory, good features, but the flash, at close range, is a little heavy though the camera is very light. Bears excellent colour corrections and skin tones. Sports a dependable Li-ion battery for longer life. But what scares me most is the Made-in-China tag. That is what makes it cheap, I guess"
