

Samsung SGH -V200C

Smile, twist and click

The SGH-V200C gives you a 180 degree rotating camera; the phone lets you flip and zoom images right while taking pictures. Apart from being tri-band, MMS and GPRS enabled, it is also sleek and stylish, with a crisp, vibrant 16-bit display. However, the external antenna does get in the way.

Menu operations in this model are far simpler as compared to the earlier R220. The easy to use four-way scroll key allows you to hop directly to predefined menus.

The memory capacity for contacts 500 names and also an extra SIM capacity of 250 names with a 32k SIM; and with 16 MB of internal mem-

ory, it allows you to store a sizeable number of images, ring tones and messages. The device also comes with an extra set of batteries.

The phone has an Infrared port, but for some reason it failed to receive any sort of data in our tests. Even though it is MMS enabled, you can't add audio to your messages, and the T9 dictionary does not allow you to save custom names.

Overall, this is a nice phone but does not justify the price tag of Rs 29,999.

SPECIFICATIONS

16-bit display, 355 x 288 camera resolution, 500 entry address book, 16 MB inbuilt memory, GPRS and Tri-band enabled, MMS capability and two sets of Li-ion batteries

HP PSC 1210 All-in-One

Magic box

The PSC 1210 is a simple and compact multifunctional product from HP. It converges printing, scanning and copying into one single unit that is not larger than a full size inkjet printer. The software required for all its tasks comes bundled.

The printer resolution is 1200 x 1200 on plain paper, and 4800 x 1200 on photo quality paper. It took just 18 seconds for a full sized text test page in normal mode. The photo-quality test prints were comparable to the best in the low-end printer class.

The flat-bed scanner can scan A4 size paper at a maximum optical resolution of 600 x 2400 dpi and 36-bit colour depth. Twenty seconds for a text document was what the scanner took,

and the quality of the scan was acceptable. The results were disappointing for high quality photo. The OCR software gives a minimum of errors. A press of a button copies a document.

The HP PSC 1210 is the ideal device for home use where you print and scan occasionally. We don't recommend it for colour copies and scans, however. But finally, at just Rs 7,999, it is the best thing to hit the market in

recent times. Go ahead and buy it!

SPECIFICATIONS

1200 x 1200 dpi maximum resolution (4800 x 1200 optimised dpi when printing from a computer on premium photo papers using 1200 x 1200 input dpi), 600x2400 dpi maximum scanning resolution at 36 bit colour, USB interface, 8 MB buffer, 2 cartridge printing (colour, black).

Pushpam HandsPC 1600

Touch me not

The HandsPC 1600 has several good features, and has an elegant silver body and chrome finished buttons that make up the bottom third of the body. It looks quite like an iPaq, and at first glance, it's hard to distinguish it as a locally made product.

The 1600 comes with a bright white backlight, which is not crisp or sharp enough for reading. The touch screen also lacks accuracy, but the handwriting recognition is excellent, and the preferred input mode is writing onto it. The user interface is similar to that of the Palm OS.

This PDA is packed with features—it has an MP3 player, a Dictaphone, and powerful PIM functionality. The

most important feature is the bundled software that is customised for Indian professionals—one that caters to accountants, and the other to

LIC agents. These software have full functional capability provided by similar desktop software.

The 1600 Hands PC is priced at Rs 19,200, which may seem a little steep. This handheld does have customisations, but that does not justify the price tag.

SPECIFICATIONS

33 MHz Motorola Dragon Ball processor, Penbex OS, 2-inch 12-bit colour display, IR port, 64 MB Compact Flash, serial connection
