

Types of Accounts

The following terms each identifies the account as being:

Bank: A bank account.

Accounts Receivable: Used for providing customers with a line of credit.

Other Current Assets: A current asset other than a bank type account or a receivable type account. A prepaid bill is an example of a current asset.

Fixed Asset: Fixed assets include such investments as buildings and land.

Other Asset: An asset other than a current or a fixed asset.

Accounts Payable: The account that is used for the purchase of products. Multiple payable accounts can be defined.

Credit Card: For company credit cards.

Other Current Liability: Any current liability, other than a payable account or a

credit card account. Income tax payable is one such liability account.

Long Term Liability: A would be a long term liability.

Equity: An equity account; say the share holder capital in a company.

Income: A standard income account. Sales accounts are all income accounts.

Cost of Goods Sold: When a product is sold, the inventory is reduced by the cost of the goods sold. This account keeps track of your total cost of sales.

Expense: Expense accounts are for all expenses such as fuel, power, water, rent and staff costs.

Other Income: A non-standard income account.

Other Expense: Any non-standard miscellaneous expense account.

(if you've purchased clothes using your credit card) with the Transfer column pointing to 'Liabilities: Accounts Payable: Credit Card'. Finally, create an entry with the same amount in the Savings Account with the transfer field, pointing again to 'Liabilities: Accounts Payable: Credit Card.' This completes the cycle and settles the balance amount in the Credit Card account to 0. You can check this by double clicking on the Credit Card account within 'Accounts Payable' in 'Liabilities.' It looks something like this:

Entry within Clothes

Description: Clothes Shopping

Transfer: Liabilities: Accounts

Payable: Credit Card

Expense: 150.00

Entry within Savings Accounts

Description: Repayment of Credit Card bill

Transfer: Liabilities: Accounts

Payable: Credit Card

Withdrawal: 150.00

At any instant, while you are using this software, you can view the Profit and Loss value in the bar just below the toolbar. If the values show in dollars, click the arrow button to the left, and from the drop down list, select INR. This figure gives you information about your current financial situation.

Once you have updated all your income and expense details into proper accounts in the software, you can go on to view the reports. When you open a report for the first time, it will show you figures in US dollars, so you need to specify the

currency as Indian Rupees (INR). Do so by clicking Options in the toolbar, then selecting the report's Currency INR. Press OK for the changes to take effect.

In the Report section, the most frequently used fields will be Accounts Summary, Profit and Loss Account and Bal-

ance Sheet. GnuCash provides all three, along with a set of pie and bar charts such as assets bar chart, income pie chart, and others. After you've chosen all your settings, choose the folder and the file where all the data should be stored. Do so and close the file.

Quasar

In Quasar, the base package is available free of charge for a single computer, while add-on modules are available for a nominal fee.

To install Quasar, you need the quasar-1.2-3.tar.gz file. You can download the software from www.linuxcanada.com. To start the installation, execute the following command: `'tar -zxvf quasar-1.2-3.tar.gz'`. This will create a folder called 'install'. The next step is to go to the 'install' folder and execute the install.sh file. When you execute this script, it will install all necessary files, and start the Quasar server.

When the Quasar server is up and running, start the GUI client by executing the command `'quasar'` in the terminal window or run window. When the software starts for the first time it will request you to select the default language; choose 'English (United States)'.

Quasar has a license agreement that you have to accept in order to get to the welcome screen. The welcome screen provides you with an option to 'Open company' or 'Open sample company.' If this is the first time you're using the software,

Create a new account here

select 'sample company,' then go to **File > New Company**. A wizard will take you through the process of creating a new company. Here, you have to specify the mailing address, the month to be set as the first financial month and the filename for the data file.

Before you begin working with the software, you will have to set up a few important configurations manually. Go to **File > Configuration > User Configuration > Internationalisation**, and press Customize. Here you will be able to customise a lot of settings—from the date and time, to
