

Dear Readers,

Buy a product, and the manufacturer is automatically bound to a simple contract with you. You pay for the product, and they promise to keep you satisfied for the duration of the warranty.

Too often, that promise is broken. What can you do when things go wrong?

The Digit Test Centre gives you authoritative technical reasons why you should, or shouldn't buy a particular make of hardware. It's your authoritative experience that describes how well the company honours its obligations once you put the money down.

Here is your chance to say your piece on IT products that you own, in our first service and reliability survey. Did you get outstanding after-sales service? Are you so happy with your purchase that you must share the good news? Do you get the run-around from your dealer? Are you stuck with a dodo of a device, with no recourse in sight?

The first Digit Service and Reliability Survey commences today.

We invite you to speak up, and be heard.

Assistant Editor

Service & Reliability Survey 2003

Your experience will form a part of the survey to accompany the Zero One Awards in the December 2003 issue. Be a part of a larger voice, demand better service standards and get the reliable products that you deserve. Logon to www.thinkdigit.com/survey and use this unique access code to record your vote.
