Lexmark X5150

The ink guzzler

The X5150 is Lexmark's mid-level MFD, and like the Epson CX-5100, does not have stand-alone faxing capability. It is simple, yet beautiful. With silver-coloured panels over the contrasting jet black body, the X5150 should look great on any desk.

Except for the absence of full-fledged faxing capability, every other aspect here is up to the mark. The X5150 can be connected to a PC using the provided USB 2.0 interface, and the power and the USB cables come bundled, along with the driver CDs and the software faxing and scanning software.

On the performance aspect: the X5150 was second in the speed test, printing out a text document in just 18 seconds—but it stood last in the image speed test. The quality of printing was average.

It surprised everybody, when it quickly scanned the test image to place second. Overall, the scanner unit integrated into the X5150 makes up for the average performance in the printing department. Because of the mediocre printing unit, the copies from the X5150 do not quite come out great. Copying a document take a long time too.

In the cost-per-page analysis, the X5150 slipped in the rankings, with its tendency to guzzle ink. A colour page costs as high as Rs 9, and a black and white page will cost you Rs 6.

Priced at Rs 10,999, the X5150 seems great when considered in its category. However, there are better options available that one should consider before opting for the X5150.

Price: Rs 10,999

Pros: Good scanning capabilities

Cons: Extremely bad printing quality

HP OfficeJet 6110

True OfficeJet

The HP 6110 is the next step in the evolution of the HP 2210. The 6110 is fit for a typical small office, where one expects features such as good faxing capabilities, one touch dialling buttons and so on.

The OfficeJet 6110 sports an elongated design—it seems bulky compared to the others. The base is wide, and takes up a lot of desktop real estate. One particular flaw that has been carried over from the HP 2210, is the design of the paper trays—the output paper tray still sits on top of the input tray, and so, when you add paper, you need you remove the out-tray.
