

The feature list on the 6110 has gotten a trim, and does not include a memory card reader. But because it is targeted at office environments, it integrates an automatic document feeder. The 6110 also comes with USB 2.0 and so allows a full-speed USB connection for faster printing.

The HP 6110 took around 22 seconds to print our test page, and took 293 seconds in the image printing speed test. But the points it loses for time, it makes up in quality—the print-outs were fantastic, with minimal colour deviation and true-to-original details.

The Officejet 6110 was decent when it came to scanning speed, taking 19 seconds. The 6110 was the only MFD that could distinguish between the finer lines, in the resolution test. However, it took 28 seconds for a copy, which was the slowest.

Priced at Rs. 18,999, the Officejet 6110 is suitable for a small office environment. The sore point was the paper handling capacity and the slow printing and copying—parameters of utmost importance in a typical office.

And the winner is...

The Canon MP-730 was a clear winner in the Prosumer category, thanks to its great performance, friendly interface, coupled with features such as memory card reader, USB 2.0 support and plausible button layout. Though it's slightly expensive, it had the lowest cost per page, solid performance and good after-sales support across the country—this won it the title.

The X5150 from Lexmark won the value award with its decent performance and sparse features that come at a great price. Unfortunately, if you are looking for a printer for bulk usage, the

Decision Maker

	MFD for your Home	MFD for your Office A MFD that can print	MFD for professionals
You Need	A decent performing MFD with features that can replace your existing printer, scanner and does not cost a bomb	and scan fast with decent quality and with low Cost per page.	A MFD with all best features packed into a single package, to deliver on all grounds and also have some extra frills
Look For	features such as, atleast 600x600 dpi printer and 600x1200 dpi scanner,stand-alone copying feature and low cost per page.	Features like Automat-ic document feeder, Dialpad for faxing, USB 2.0 and having smaller dimensions	Memory card reader, USB 2.0, Direct printing from flash cards and supports the highest possible resolutions
Our Pick	HP 1210, Lexmark X1150 and HP 2110	Canon MP-730, HP 6110, Epson CX-5100	Canon MP-730 and HP 2210
Price	Rs 5000 to Rs 10,000	Rs 15,000 and above	Rs 20,000 and above

X5150 might not fit the bill, given its high cost per page.

In the Consumer category, the HP PSC 2110 managed to take the top spot with a good overall performance and a decent feature set. It fared better than the rest of the crowd on all counts. Though the Epson Cx-3100 had more features than the PSC 2110, it failed to catch up with it and hence, lost by a fairly small margin.

There was cutthroat competition for the value award, with the Lexmark X1150 and the HP 1210 battling it out for the coveted place. However, the Lexmark X1150 beat the HP 1210 by a small margin of just 0.05 points, but unlike the HP 1210, the X1150 does not have a stand-alone-copying feature, and it has a higher cost per page than the HP 1210. On the price front though, the X1150 is cheaper than the HP 1210 by Rs 800. Yet, if price is the last thing on your mind, we recommend that you purchase the HP1210.

HP 2110

We tested the scanner units, using this image document. It is quite clear from the results that the HP 6110 gave the best overall results, with good tonal balance.

The HP 2210 and Canon MP730 placed second and third, respectively. The HP 2210 was less sensitive in the darker regions of the image. Similarly, the Canon lost out on picking up lighter areas. The Lexmark X5150 also scanned the image well, but could not match the others in printing quality.
