

The Write Ability

CD-writing software make a huge difference when you have to get your work done quickly, but when it comes to features, how do they stack up against each other?

With their various purposes of back up, storage and good ol' sharing, CD-Writers are fast becoming a granted in every system configuration—and they don't cost an arm and a leg either. The new criteria, thus, is not of cost, but of purpose. The CD-Writers available today are really fast, and many of them perform at the absolute limits that current technology allows—and so, most 48X and 52X drives, whoever the manufacturer may be, offer similar performance and features. Therefore, the software can play an important role in your CD writing experience. Today's software have features that can help you with specific tasks such as boot-up CD creation and VCD creation, to more general tasks such as CD copying and data backup. We tried to classify them according to what they were specifically good at.

Pinnacle Instant CD/DVD

Pinnacle's Instant CD/DVD is a full-featured CD-burning software that has goodies such as video capture and audio editing. It has a friendly interface, with single-click access to the most commonly used tasks. It's good for both novices, as well as power users—for infrequent users, Pinnacle Instant CD/DVD has wizards that guide you step-by-step through the procedure for burning data or multimedia CDs. It can write on CDs and DVDs. You can create bootable CDs, and creating ISO images is also not a problem. Another good feature supported is video-encoding—you can edit MPEG and AVI files using the included editor, and also burn these files onto VCDs. It has a CD copying feature which can be used for backing up of your favourite CDs and DVDs, and you can use the provided label creator for labelling them. A unique
