

Drive Image 7

Crash helmet for your PC

Drive Image 7 is built to resolve banish backup blues. All you need to do is use its wizard for backing up your drives according to your preferences, and it does the rest for you, fast. Installation was a breeze—you have the option of storing your drive image to a hard disk, a network drive, a CD, or DVD-R or RW.

You can specify the amount of space on each CD or disk to be used so that the backup image can span across disks, and you can make the software ignore bad sectors on the hard drive. A compressed-backup feature is available too.

In our tests, Drive Image

took 1 minute and 16 seconds to make an image of a 601 MB drive, and 4 minutes to restore a 549 MB folder. It performed all the tasks it claims to do—fast backing up, restoring single files, and verifying file integrity—at just Rs 2,997. So the next time you want to back up your data, you know what to use.

SYSTEM REQUIREMENTS

Drive Image 7.0 for Windows XP & 2000: 256 MB RAM, Pentium compatible or higher processor and CD-ROM drive
Drive Image 2002 for Windows 9x, Me, NT Workstation 4.0 (SP6a): 32 MB RAM, Pentium compatible or higher processor and CD-ROM drive

Stellar Phoenix 9.1 FAT Data Recovery

On the recovery trail!

Stellar Phoenix is a data recovery tool that allows a user to recover vital data from a logically damaged hard disk drive.

This software is surprisingly easy to use. In case of a hard disk crash, all you need to do is attach your crashed hard drive to another system, configure it as a secondary drive and install the program on a healthy hard disk. The Phoenix software will then try

and recover the data from your crashed drive. Apart from this, it also has features such as File Filter that lets you include or exclude certain files on the basis of their extensions, before transferring data. Suppose, for instance, you want to recover files with .DOC and .PPT extensions, all you need to do is add these extensions to the File Filter option and

press Include. After recovery, only files with these extensions will be transferred. It also has a File Mask feature that displays only those files or folders that match a specified file mask.

Overall, the software is a must for all desktop users who want to recover data

Creative MegaWorks THX 2.1 250 D

Monstrous sound system

MegaWorks 250D is a 2.1 speaker system from Creative that is targeted at the high-end PC market, where quality wins over affordability. It has two satellite speakers rated at 75 Watts (RMS) one sub-woofer at 150 Watts (RMS) and a BASH amplifier. It has a rated frequency response range of 25 Hz to 20 KHz—typical for any good quality speaker system. The sub-woofer is

stress the speaker at both low and high frequencies. Its powerful sub-woofer reproduced low frequencies with absolutely no distortion, even at maximum volume. The satellites did the job well in the high frequency sound test.

The MegaWorks 250D is priced at Rs 16,500, and though its performance is exemplary, we still feel it's a little overpriced.

built using wood, which ensures deeper, richer bass.

It accepts both digital and analog inputs, and we tested the speakers with an Audigy2 Platinum Edition sound card on an AMD Athlon XP 2400+ system with 256 MB RAM. We played a set of audio files that

SPECIFICATIONS
