Fuelling The Pursuit Of Technology Knowledge

Drool Maal

AirCurve

The AirCurve from Griffin technologies is an acoustic amplifier for an iPhone. The beauty of this translucent cube that is not apparent is that it drains zero battery from the device, as the audio boosting technology used is completely analogue with no electronics involved. A waveguide horn is used to collect the sound from the speaker of the iPhone and the sound is amplified by ten decibels for all to hear. If this is not a steal at \$19 (Rs 950), we don't know what is

Ovalia

Remember Will Smith being confounded by that egg shaped chair in *MIB*? Don't pretend you have forgotten already. The chair is called the Ovalia and was designed by a guy called Henrik Thor-Larsen way back in 1968. The chair is timeless for its design, but the 21st century edition, 40 years after the original came out is pimped with JBL speakers, is made up of polished aluminium and is available in 20 different colours. Only 900 of these are ever going to be made, and they are yours for the taking, if you have \$7,700 – Rs 3,85,000 – that is

Nikon Media Port UP300x

The Nikon Media Port UP300x is a strange device. It is basically a headphone with a screen for viewing videos, Wi-Fi capability and 8GB of memory. You can move and shake your head in different ways if you don't want to control the Media Port or surf the Net with the controllers on one of the cans. The screen simulates a 50-inch screen at a distance of 30 meters, and has features like a white wiper line to draw attention to the screen if there are a lot of moving objects around. You can see the screen only with the right eye; buy it only in Japan, and only for 69,800 Yen (Rs 35,871)

Motorola Aura

Motorola launched Aura – a slider phone for the high-end market. We'll throw around some phrases associated with it – 62 carat sapphire crystal lens, electro and hand polished, chemically-etched stainless steel, tungsten carbide coated gears, quad-band GSM, 130 precision ball bearings and a Swiss made rotating mechanism. The Aura sports the world's first circular display, and a 16 million colours 300 dpi one at that. Yours for a mere \$1,999 (Rs 99,950)

Space-suits

There is a bunch of really cool space gear available at thespacestore.com. Along with helmets, backpacks and boots, you can buy these space-suits. The suits are made from authentic materials, are museum quality, and come in large and extra large sizes. For \$875 (Rs 43,750), you can strut around like you just walked off the sets of Armageddon or for \$9500 (Rs 4,75,000) you can fake your own moon landings.
