## Let the modding festivities begin !

Some machine men of the digit community just cant get enough of modding. Take Rollercoaster a compulsive modder who even took apart a UPS to try and mod it with funky LEDs and increase battery life. Here's his latest thread on modding where he shows off his CoolerMaster Scout mod with neon. <http://www.thinkdigit.com/forum/showthread.php?t=122108>

**[Modding] Cooler Master Storm Scout Cabinet - Ramp Walk**

My cyborg arm has been itching for a few days due to the lack of the modding for an *insanely long time*. So, solely to satisfy the inner BuckRodger, I decided to dump my previous cabinet and freshen things up.

I am also a photography hobbyist with a Canon 500D and since spending the whole Diwali snapping fireworks, I wanted to do something different. So, I went with a mod that would look the coolest in pictures. As you may be able to tell, shooting colourful lights is the best kind of photography I like. (Straight LowDown - See all the pics of this cabinet - slideshow, set)

Enter Cooler Master Storm Scout (see manufacturer page, video review). I purchased one from theitdepot.com along with some neons and internal lighting paraphernalia. I spent the last weekend switching cabinets and installing the internal lighting.

This is my first time with a "proper" cabinet. I was amazed by the tool-free design, the solid steel, wire management, dust filters, wire mesh and side window. The best however is the quality of cooling it provides. My system temperatures went down 10 degrees right away in comparison to the temps in the previous cabinet. The handles on the top are really sturdy and made it very easy to move it around for the 'photoshoot'.

It is such a shame that I didn't move to a branded cabinet earlier then now. The benefits are so many and indispensable once you have tasted them. The stock fans are huge and very well placed. It is also such a wonder that the cabinet is so quite.

| Manish Maini              | Delhi            |

## tezguru.com

It's not everyday that search engines get launched. Especially by 15 year olds from unheard of rural areas like Siwan in the heart of Bihar. But this is precisely what Shivendu Madhava, a proud member of the Digit community since 2006, has done by launching a new search engine called [www.tezguru.com](http://www.tezguru.com), while struggling against considerable odds. "Since internet connection is a scarcity, my dad drives

me to a cybercafe which is 16 kilometers away by motorcycle. I sit there for eight hours a day and work on the search engine" he says. What about the engine itself? "It's back-end is not based on any other search engine", he explains. How then did a 15 year old kid with very limited internet access build a search engine from scratch? "I've got interested in IT four years ago. Since then, I started learning programming

languages like C++ and then eventually PHP" he says in his rustic English. He even printed promotional leaflets to locally popularise the engine's ability to sniff out songs in regional languages and he also promotes it on a developmental forum called biharbrains.org. His efforts seem to be paying off. "Tezguru.com gets upwards of 3,000 unique hits on a daily basis", he says. Now this bright boy is looking for venture
