Just bought HTC P3400i... Attempting a Review

Looks

The first thing one notices are the looks; and let me tell you I hated this handset when I looked at its pictures on the web. But I was surprised that it looks pretty good when you have it in front of your eyes.

Touchscreen

The Touchscreen is responsive in most cases. But the stylus is not comfortable enough for my tastes. I am currently using an ink-finished-pen with a big tip; this is much better for navigation as well as writing on-screen.

UI

The overall speed is not anything to talk home about. It is somewhat slow.

RAM usage is high at default setup with no programs running. Very less free RAM left at startup, just 33%. (Is windows sluggish in every platform?)

The Today screen is awesome and adds a lot of functionality to the phone. (Is it the same is all new WM phones or just HTC? I think its only HTC?)

Camera

Camera is just okay. For viewing pics on phone or posting to blogs. Just for emergency uses. Despite the 2MP sensor, quality is not much better than my age old Nokia 6600's VGA camera. And its painfully slow. Video capture is handicapped at QCIF resolution.

Music

Music quality through the single speaker on the phone is fair for soft numbers, it just isnt the thing for heavy metal stuff. But loudness, my my, I didnt expect a PDA to be so loud. Not that its very loud, but its much more than what I expected. The Treble is more emphasised through the external speaker as is the case with many mobiles.

But I seriously hate the proprietary jack. A 2.5 mm jack would have been tolerated. I am an earphone-buster and this one would last only 2-3 months. A replacement would therefore be expensive due to the proprietary jack.

Productivity

The phone allows creating, viewing and editing Word and Excel files. Viewing Powerpoint files is supported but it is sluggish. I was surprised to see support for Office 2007 File formats. The Adobe PDF reader makes an appearance here as well. But for all practical purposes, it ain't that usable because of the slow processor.

Conclusion

Well well, I definitely am in love with this device. Perhaps because its my first experience with Windows Mobile. I was able to adapt to the new OS in a period of one day.
