

Future of gaming

The Emotiv EPOC headset is a Brain Computer Interface (BCI) device that will let gamers play games by mind control techniques

Nanotech batteries

Researchers at Maryland Nanocentre have developed a nanotech battery that has a storage capacity, 10 times more efficient than present day technologies

Tomorrow's Tech

power and power efficiency by making their desktops more energy efficient when idle.

Energy consumption is coming down across the board and is not just relegated to the CPU powering your system. Google.org, a philanthropic branch of Google is developing PowerMeter, which taps into smart meters and helps track energy consumption through PCs and smartphones. The service will eventually be rolled out in India through Reliance who have partnered with them this year. According to Google's Ed Lu, they aim to save a "socially relevant amount of energy" through these means.

Mobile-internet

Rumours of Symbian's death have been greatly exaggerated. Nokia made an announcement recently that they would be working on only one Linux (Maemo) phone a year, so Symbian remains.

Click & Save

To celebrate the new year, in 2010 we are offering a **cash-back scheme** to all our readers who buy their copies online from the Digit store. Not only do you save Rs. 10 on every copy purchased, you also get:

- Free shipping by courier to your doorstep
- Free replacement in case of any defects or damage
- Access to exclusive offers, contests etc.

All you have to do is visit www.thinkdigit.com/store, buy your copy of Digit online and receive a **cash-back of Rs. 10** which you can redeem on your next purchase.

Go ahead, enjoy and spread the word.

We are very excited about Fring, the unified mobile app that can be used to conduct video calls with other users on Skype using the phone's Wi-Fi or 3G connection for free. "This is a two-way video call!" says an enthusiastic

developer showing a demo of the application on YouTube. It's the world's first application to make mobile video calls over Internet protocol (IP). The company has a history of bringing free calls and Twitter over the Internet for phones, and Fring works with any kind of internet connection - 3G, Wi-Fi, GPRS, EDGE & WiMax.

"We have a responsibility to continue breaking the mobile-Internet barriers" said Avi Shechter, CEO of Fring.

Fring also supports iPhone/iPod touch, Android, and Windows Mobile handsets, but will roll out similar features for these platforms at a later date. We wonder how it will work on them without a front facing camera.

We are also looking forward to number portability, which will be rolled out this year in India. That should give consumers the freedom to opt out of an operator that has a "non-fringing service" plan. **d**

Does your Security know who is working as a Contract Worker in your Organization?

Contract Workers help in enhancing the bottom line of your business but ignoring the safety aspects in the process can result in devastating effects in these perilous times. LabourWorks™ is a complete Security System which helps in Profiling Temporary Labours on International Security Norms, Creating a repository, also with Time Attendance.
