Paper loading	7	6.5
Software user interface	6.5	6.5
Ink levels	7	6

The printer has two paper trays – one at the front and one on the side like you would normally see in a copier. It also has something least expected in printers – a hard drive. It performs exceptionally well, and offers excellent control over the many features, thanks to the display and buttons.

This is obviously a no-frills printing machine for a busy office. It doesn't support A3 paper, however, which some of you might need.

This colour laser printer uses four separate, and huge, toner cartridges – you won't have to change them often.

is ideal for small office setups. The printer is built well, but looks very ordinary. The front and rear tray are well put together, with enough extensions to support A3 paper.

Setting up the ink tanks in the printer head is similar to the Canon iP3680, but with four ink tanks in this case.

This is a fast printer, and even A3 colour prints on plain paper take under a minute to complete. It's also quick to cancel a print, stopping immediately when you press the Cancel button.

However, when printing 15 copies, we noticed that, like some of the other Canon's, this printer

Epson B-500DN

A few things are unique here; the LBP7750Cdn's power switch, which is usually placed at the back of a printer, is found behind a protective cover on the top, and paper loads sideways!

One expects speed over everything else in a printer of this class, and it doesn't disappoint. Double-sided printing speeds are excellent, and the synchronised paper flow around the printer is truly a joy to watch.

Canon PIXMA iX5000

Canon iX5000 is the only A3 size printer that was tested and

pauses for a bit, unexplicably, after 10 or 11 pages are printed.

Epson B-500DN

This is an attractive inkjet printer from Epson, and has an unconventional design.

All the elements of the printer are compartmentalised, and stick out – literally. There is a separate section for the front tray, the cartridges and the rear tray, all of which jut outwards.

There is a 2 line LCD display, which is quite ordinary, as it has no backlight. However, operating the menus is easy and intuitive.
