ATI Radeon HD 5970

AMDs return to high-end competition

ATI's Radeon HD 5970 is an extreme high-end graphics card which comes equipped with a dual GPU thus making it the best performing card in their lineup. The 5970 has a 512-bit bus with a core clock of 725 MHz and memory clock of 1000 MHz along with 1 GB of DDR5 memory.

Design-wise, it's very similar to the slower HD5870 and HD5850 cards. The card runs on a 6 and 8-pin power connector configuration. It has a single fan cooling system, with two air-inflow compartments beside the fan.

The card was tested on an ASUS P6T Deluxe motherboard with an Intel Core i7 975 processor. The card delivered

the goods during performance. In general, it is a good bit faster than the dual-GPU NVIDIA GeForce GTX295.

The only thing that is of concern is the heating up of the card. Due to the closed design,

is a key component and has to be chosen to provide enough air-flow to enable quicker cooling of the card. Considering this is a high-end product, the price of Rs. 42,000 is quite steep. The DX 11 compatibility

Complete results of the Radeon 5970 at www.thinkdigit.com/d/1001_rad5970

it tends to heat up a lot. It's also a little cooler than the GTX295 under load though. The cabinet

is an added advantage even though there are no DX11 compatible games around for now.

Specifications

Engine Clock: 725 MHz
Memory Clock: 1000 MHz
Memory Interface: 512-bit
Video Memory: 2 GB DDR5

Sony DSC-TX1

The Sony touch

The Sony DSC-TX1 comes in an uber-slim solid metal shell and is one of the sturdiest cameras around. This is a 10.2-MP, 4x optical zoom portable camera.

One of the key features of the TX1 is the touchscreen used for almost all of the features on the camera. The zoom trigger feels poorly designed – it's too small and has too little travel. The front is protected by a metal sliding panel. The piece we received had some fine scratches from the slider movement.

The screen quality isn't great. The user interface is basic and

easy to use. The lens is placed away from the corner of the camera, so your finger won't block the view. The touchscreen is decent, but display a little laggy. It has variable focus points and you even choose which area you want the camera to focus. It even

does HD video. Although, it lacks the features and performance, the compact size is something that will appeal to many. It'll fit into any pocket size, so you can take it anywhere you go. If that's what you want, the price of Rs. 20,990 should not be an issue.

Specifications

10.2 MP CMOS sensor, 3-inch touchscreen, 4x optical zoom, video resolution: 1280 x 720, Dimensions: 93.8 x 58.2 x 16.5 mm, weight: 119 g
