

who want quality products. Yes you have to follow market trends, but you can also conduct a test only on high-end LCD panels featuring MVA, IPS and PVA panels (where TN panels are a strict no-no). You're doing the same in graphics card testing (the armour clad beasts don't show up when you are reviewing entry-level cards).

My next request – please review audiophile grade speaker systems. No, not some occasional review of Bose or Klipsch in the Bazaar section, but a complete review of 15 to 20 high end 5.1 speaker systems. Although most of these brands are unavailable in India, please test the ones that are available. Please tell us why we shouldn't go for Bose, how to assemble a good home theatre set-up comprising AV receivers, sound cards, amplifiers, woofers and speakers, hardware and software decoding. I am sure most Digit readers don't have any knowledge about this technology segment. I know this one is tough, but please make it happen somehow.

Digit is my best friend and I really don't want to read online review sites. Most of them are in some way biased. I am reading Digit for years and I've realised that most of the reviewers prefer AMD more than Intel and I can bet my money on the fact that they dream of crushing Intel on 2011 (just like I do). But while recommending, you tell us to choose Intel as that's the best option right now. That's why I love Digit.

One last thing, I started reading Digit when I was in school (2000) and I still read it. I selected my Creative Inspire 5200 based on the speaker test you conducted somewhere in 2002. I still remember the cover. The model was so cute. I remember people asking Digit for her contacts. Oh yes, please bring the models back. All the people who said it's cheap are... men? Digit looked way cool then. But the school boy of 2002 now works in office and earns money and Inspire doesn't inspire him any more. He wants Klipsch, he wants Denon, he wants Bose and he's so confused. That's the only part Digit hasn't ever taught him. I hope you understand...

LETTER OF THE MONTH

✉ I'm 16 years old and started reading Digit last year. It's just amazing. I never thought Digit would help me "earn" an iPod touch! A couple of months ago, you carried a TED video featuring mathematician Arthur Benjamin. I was just stunned to see it. That guy could calculate squares of 5-digit numbers in his head - I was bubbling with excitement and I googled him up. He had written a few books on mental math. I just blazed through them, moved on to Martin Gardner and other authors and found that I too could do pretty well in mental math (not as good as them, of course). So I took part in the National

Mind Math Extravaganza 2009 held at New Delhi and guess what? I won the first prize – an iPod touch! I'm on cloud 9 right now! Thank you once again for the superb magazine and even better DVDs! Hope you publish this in your magazine and spread the word of how unexpectedly Digit can touch people!

Mrinal Mohit

We hope you enjoyed the TED coverage in the December issue and we're very glad you've won in the competition. The iPod Touch is an excellent PMP and we're sure you're enjoying it. Congratulations!

Aditya

✉ Like you, many of us like to use high-end LCD screens based on MVA and IPS panels. Almost all LCD monitors sold are based on TN panels. They are affordable and good for most of us. Manufacturers too, find it cheaper to make these displays. That's a trend and it doesn't look like it's going to change anytime soon. We do test high-end displays every now and then in Bazaar, so you'll have to keep an eye out for those. It's the same case with speakers. You can go with Bose products. They're pretty good most of the time, just not affordable. So, obviously they lose out in value for money. If you want something even better, go for a Genelec setup. The general rule of the thumb when it comes to audio products is that the more expensive, the better it gets. Your suggestion for an article on setting up a home theatre setup is noted. We could cover it in one of our entertainment issues.

Rossi

✉ Guys, you're doing a great job. I really liked the December 2009 issue. I was surprised that you had entirely removed the Buying Guide section, but was pleased to find a great compensation in Agent's very own Fast Track.

Please provide *Far Cry* patches in your DVDs because I don't have a net connection and my *Far Cry* mod requires 1.3 patch or 1.31. Also, please do provide game wallpapers.

Abhishek Anand

✉ The *Fast Track* to product purchasing tips was Agent's ideas. We're glad you liked it. We'll try and carry the *Far Cry* patches you need in the February issue. We carry game wallpapers every now and then. The last lot of game wallpapers can be found in the Playware disc of December 2009.

✉ Thank you very much, and Congratulations for a great December issue! First

of all, I'm really very glad, along with other readers, I'm sure, of getting back the old Digit Archive. Your magazine content is really very helpful. The new attraction – Digit TV is really cool. The sound quality should be better though. But overall, it's informative and interesting. The Fast Track of the issue is full with colourful images and the page quality is better than previous issues. The issue contains info about BD Players which I think is what we need to know. Thanks a ton and all the best.

Debraj Rakshit

✉ Thank you for the feedback. We're trying to rectify the audio problems in Digit TV. As months go by, I'm sure you'll see more and better content. Stay tuned. There's more to come.

Siddharth

✉ Happy New Digit Year to Team Digit, and all the Digitians. It picked me up when I was a child, nourished me with all the tech and helped me survive in the 21st century. Today's technology is very complicated, and I have picked up a few tips and tricks over time to handle it, and I can stand tall today in this world, all because of Digit. I thank all those guys behind the pages for providing cutting edge content that gives sheer pleasure to the readers. I also want to congratulate you people for your success and my best wishes are always with you who pioneered the computer age.

Jaydeep Chakrabarty

✉ The team was very pleased to read your heartfelt mail.

Michael
