

Killer rigs

Plan your dream configuration depending on your needs. Whether budget, gaming or high-end rigs, you'll get a headstart on it all

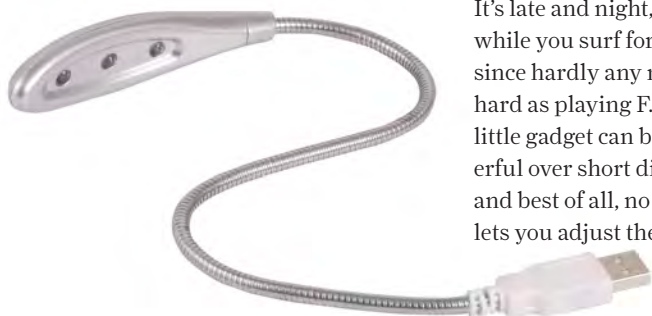

MIDI guitar

The innovative folks at released a funky looking MIDI controller in the shape of a guitar. It's got 32 LED push-button switches and 6 touch sensitive copper plate switches

Feature

USB Light (Rs. 65)

It's late and night, and everyone's asleep. You're trying real hard to not wake up the house, while you surf for... err... whitepapers. Your laptop screen brightness is all the way down, and since hardly any notebooks come with key backlighting, even typing thinkdigit.com can be as hard as playing F.E.A.R. without ever using your flashlight — impossible. That's where this little gadget can be a lifesaver. It connects to USB, and has three LEDs that are pretty powerful over short distances. You're never going to have to squint to find the right keys again, and best of all, no one is going to be disturbed by bright lights. The bendy-wire-neck-thingie lets you adjust the light just so, and it's only Rs. 65. Get it now!

USB Hub (Rs. 100)

Who wouldn't want this funky looking USB Hub? Unlike those boring HUBs that have all their ports on a single line, this one is more functional. Something definitely worth having plugged into your PC at all times.

FM car transmitter (Rs. 200)

Some people have music systems in their cars that are worth as much as the car itself. With CD-changers, satellite radio, funky displays, and other features that most can't afford... For the rest of us, there's the FM car transmitter. What this gadget does is let you turn a regular USB flash drive or memory card into an MP3 player. Connect your pen drive to this gadget, hook it up to the cigarette lighter port, tune your radio to the specified frequency, and you're good to go. There's a remote and a display to show you the track details, but make sure you're not bending over trying to read the small font while driving. What's more, you can now play DJ for some of the other poor car radio owners stuck in traffic around you...

USB fan (Rs. 65)

For those times when you want to experience the wind in your hair, even if you're working in an AC environment. We're kidding. This powerful little fan provides life saving comfort for those times when you're working in a stuffy room and sweating right down to your unmentionables. But wait a minute... what if you put your finger in it? We were curious too, and got the new intern to do it. Turns out the blades are soft membrane — not mightier than your finger.

Chargeable Speakers (Rs. 275)

Linux fans rejoice ! This cute little penguin speaker works on a rechargeable lithium ion battery and draws power from a USB so it can be an improvement over your laptop speakers as well. The device weighs just 80 grams and is about the size of a tennis ball so don't expect to blow your ear drums with its 3 W output. Still the sound quality is definitely not bad. It can connect to any MP3 player or phone with a 3.5 mm jack making it perfect for weekend trips, picnics or even to annoy fellow commuters in the train. In case you're wondering the sound comes from the penguin's back side.
