

Pulsar

We're not talking about the bike. It seems Seagate has entered the SSD space with Pulsar their first SSD offering in the enterprise space

Xylophone Table

Xylophones can be made from almost anything. Check out this unique one that is the size of a coffee table. In fact, it's a coffee table!

Feature

Mobile battery charger (Rs. 100)

This is one of the most useful devices that we got our hands on. With this baby hanging on your bag or in your pocket, you will never ever run out of battery on your cell phone. All you need to do is put in a standard AA battery (pencil cell) and it'll charge up your phone. It has connects for Nokia (both thin pin and fat pin), Sony Ericsson, and miniUSB. If you run out of battery on that crucial call simply head over to the nearest store and pop in a pencil cell. If you're going on a long expedition to the Himalayas carry a few pencil cells and use as per your convenience. Definitely a must have.

USB adapter (Rs. 50)

This little gadget is a great utility while travelling. Often we have devices that draw power from USB ports, and there's no PC in sight. This adapter solves that problem by converting essentially any power point into a USB charger.

Foldable keyboard (Rs. 250)

A mat like keyboard that rolls up into a compact package? "I want one" would be anybody's reaction. It instantly transports you back to hacker movies where they show geeky yet strangely well built men roll open foldable keyboards to hook up to a target system. This is a full keyboard with a num pad so it makes for a great addition to a notebook. However the quality isn't so great. You'll get more exercise than you bargained for - the keys need to be pressed really hard.

USB Vacuum (Rs. 75)

This product sucks. Yes that's what its supposed to do, we know. But it even sucks at sucking! A total disaster. Avoid at all costs. The gadget only makes a hell of a ruckus. It comes with a brush attachment that can at best be used to sweep dust. It does pull in a little bit of dust, but since there are vents at the back it's essentially it's just displacing whatever little dust that it pulls in.

Membrane Keyboard guard (Rs. 40)

Ever tried to clean a notebook keyboard after you spill something on it? You have three choices. Stop using notebooks, stop eating or drinking, or just spend Rs. 40 and get yourself one of these. Surprisingly, this doesn't hinder typing at all, and apart from protecting you against your own clumsiness, also helps keep the dust away.

Dual fan foldable notebook cooler (Rs. 75)

The idea of a folding notebook cooler is nice. Not when it comes to this one though. The fans are not as powerful as the other notebook cooler and the balance is off. Buy it only if you're going to go giddy at the prospect of folding it into a neat little package.
