

iCharge Eco

The iCharge Eco is a pocketable solar charger, with support for a wide range of devices. The iCharge Eco is built around a lithium polymer battery and a 100x50 mm solar panel. The charger supports mobile phones, portable gaming consoles and PMPs, or basically any device that can charge up using a USB interface. The chargers are available in six colours. The battery can be charged using a USB interface itself, or a traditional adapter as well. If you are thinking of picking one of these up, you will have to go to Japan and shell out Rs. 4,541.

2010 Lexus LS 600H

The LS 600H is the flagship hybrid model by Lexus. The 2010 version of the LS 600H by Lexus does so many smart things to conserve fuel, that you are only allowed to control half the car.

For example, if you accelerate too suddenly, the car does not speed up as much as it should to conserve fuel, and reminds you to drive more smoothly. The air conditioning system also works on it's own, depending on fuel economy and ambient temperature, ignoring any setting that you might key in. Put the car in the Eco mode, and the car adjusts various aspects to maximize fuel efficiency. Unlike hybrid super car concepts, this one is on the streets and you can get one for a paltry US \$108,800 (Rs. 49,37,343) – without the duties that is.
