

New Samsung LED display

Samsung's new C9000 series launched internationally. These edge-backlit LED displays feature 3D support and are available in two sizes – 46 and 55-inches

Gigabyte X58 UD9

Gigabyte has released their X58 UD9 motherboard, based on Intel's X58. This behemoth supports 4-way Crossfire and SLI

HDTV test

options are missing, much to the chagrin of advanced users who will want to tweak settings. The remote needs to be pointed at the sensor before it works properly, not good if using from close. From about 8 feet away it's less finicky.

This panel features full HD support, although at its native resolution, text wasn't sharp. The blackness level is very poor, and owing to this even the lower grey shades are indistinguishable from each other. The first twelve squares were missing in DisplayMate – a poor start since the best displays will miss only the first two squares, and even the LG 47LH50YR, that didn't have a very good blackness level only missed the first four squares. Dark grey shades blend with black. Moiré was also present, rearing its ugly head in our pattern tests. Higher intensities of red will also blend as the gamut for red isn't wide and you will

notice banding. Dark shades of almost any colour will blend. When watching non-native resolution movies the black band on the top has a noticeable backlight bleed. DVD content has a lot of noise in the darker intensities. When watching native content movies, the quality is OK, but with 720p content, there is a lack of sharpness noticed.

The speakers are very loud, but there is noticeable distortion and background noise is pretty intrusive on the overall experience.

There is a lot of sibilance to the vocals. At Rs. 35,900, the Diamond Kyrock is expensive for the performance it offers, as a full 1080p display we expected it to cost more than the other

32-inch 720p displays, but the flagging performance was the last nail in its coffin.

Haier LB32R3

A higher living?

This TV looks decent, while the remote is the real novelty – it's white and looks busy with a lot of function buttons, but the labelling could be better. For example, the key labelled "source", does nothing, and it took us 5 minutes to figure out that the function "source" was assigned to the button below that.
