Time Machine

Travelling in time has always fascinated the human mind. Be it things that could be undone, saving precious lives from a disaster or a war or stopping a potential crime before it is committed, time travel can open new boundaries and horizons for mankind.

MOVIES

Back to the Future: One of the major motion pictures based on time travel. Micheal J. Fox-Marty goes back in time in 1955 to prevent the death of his scientist friend 'Doc'.

Terminator 2 Judgement Day: Who isn't familiar with the T101 and his quest to save Jack from the evil T 1000. In the first and second parts, Arnold travels back in time as a villain first and then the ultimate hero.

Bill & Ted's Excellent Adventure: Bill & Ted go on a joy ride as they travel back in time collecting important historical figures in order to pass their college project.

BOOKS

The Time Machine: Written by HG Wells, this classic novel tells the story of a time traveller who goes back and forth in time, concluding his understandings on now degenerated humans and finally as a spectator to the end of the earth.

Replay: Jeff Winston dies of a heart attack and goes back in time when he was a 18 year old kid, inspite of his repeated attempts and several 'replays' later he still cannot alter the future to prevent his death. Written by Ken Grimwood.

The Time Traveler's Wife: Debut novel of Audrey Niffenegger. One of the protagonists suffers from a rare disorder Chrono-displacement where he travels through time having no control over the time or duration travelled.

Tourism in Time

According to Stephen Hawking, the very absence of time travellers from the future puts a question mark on whether at all travelling in time is achieved by humans, he goes on further explaining that this does not mean that time travel is impossible but may be its never been developed fully or used cautiously.

Another take on this given by Carl Sagan goes something like this, that time travellers could be amidst us but are in disguise and are not recognised as time travellers.

The Grandfather Paradox

First described by René Barjavel in 1943, it states that if you travel back in time and cause the death of your grandfather before he meets the prospective grandmother then as a result the traveller's own existence is at stake as he would have never been conceived. Hence creating a paradoxical situation.

Another similar paradox by Stephen Hawking states that if a scientist has built a time machine and he goes back in time by one minute and takes a gun along with him and kills his past self with it who was still loading the gun before travelling into the past, now the question arises as to who killed whom, the traveller or the scientist. According to Hawking the man who gets killed in this situation would not negate the existence of the other as the person from the future is just a copy of the past man.

This is the first issue that we've done from the new office after shifting here this June end. Things are settling in slowly. There is a convenience store at the ground floor of the building making occasional munching on packed food items now an ease, especially during our late night ventures. Products in the test centre are still searching for their perfect placement and positioning. Maybe this month they would find their humble abode. We have a new member added on – Kareena, a friendly kitten that is being pampered by everyone around. She's also getting used to the set-up here and is actively exploring all corners of the office despite her busy schedule. She usually spends her day eating, sleeping, eating, sleeping...and then finally, eating and sleeping!
