WE SAY

The HTC Wildfire can be looked at as a mini Desire. Display is nowhere near as crisp, and the interface is not as nice. Reason enough to stay away, as nearly everything is in what you see and touch in a touchscreen phone. Price isn't much, but there are better alternatives.

7.0

A decent phone with a decent feature set, the XPERIA X8 has a very mediocre display, and Android also faces issues with lag, owing to slower hardware. Overall performance is good. The price tag makes it a bit more appealing, but there are better options.

6.5

The HTC HD Mini is a pretty decent cellphone in its own right, and as a handset, a better buy than the HTC Wildfire, mainly on account of the better, higher resolution display. If you're looking for a touch screen around 25K, there are way better options available.

6.5

Perfect for those who want to enjoy a large touchscreen and a QWERTY keyboard on the Symbian platform. It's a good media player, but lacks DivX playback. All in all, it offers good value for money at its much reduced price of approximately ₹18,000.

7.0

WE SAY

At ₹28,000, the phone lacks many features that will be missed by regular smartphone users, such as a Flash support, multi-touch, 65k colour screen etc. However, it has a capable camera and a snazzy Timescape UI.

7.0

Milestone, at its reduced price – ₹24,000, is quite good. It's got a hardware keyboard to boot, apart from its large screen, which makes for good video output as well as a good browsing experience.

7.5

Probably one of the most powerful and fastest Android smartphones around. Display is bright even from the sharpest angles. It has a mediocre camera, that is about the only let down. A very good phone for a price of ₹31,500.

7.0

For a Price of ₹10,250 the LG GM360i doesn't offer much of an upgrade over their Cookie models except a 5 MP camera and Wi-Fi with push mail support. Better options are available for the same or lesser price in the market.
