Form factor ATX/Micro ATX
ODD bays 3 x 5.25-inch
HDD bays 5 x 3.5-inch

TEST CENTRE RATINGS (All Scores out of 10)

Features 5.5
GL2030 has a humble 1600 x 900 resolution. Glossy black bezel is lovely. Lacks connectivity options.

Performance 6.5
Spyder 3 Elite gave good contrast ratio. Impressive colour accuracy. Watching movies was a good experience.

Build quality 6.5
Bulky rear. Round glossy black base allows the monitor to swivel vertically.

Value for money 6.0
The LED monitor comes at a decent price tag of ₹8,199.

Features 6.0
24-inch LED backlit monitor. It has the HDMI and VGA connectors on the rear side.

Performance 5.5
Spyder 3 Elite gave a poor contrast ratio. Display Mate tests showed backlight bleeding. Movie viewing could be better.

Build quality 6.5
Strong black matte finished bezel. Sturdy rectangular stand.

Value for money 5.5
At ₹15,499, this monitor is a tad expensive for its performance.

Features 6.5
This Brag HTPC is a fully functional Home Theater PC that gives you all connectivity options.

Performance 7.0
Excellent performer with a great graphics solution and a 40 GB SSD thrown into the mix.

Build quality 5.5
The plastic exterior does not give it the most polished look for your living room.

Value for money 5.0
Highly overpriced in its category. Display not included in price.

Features 6.0
Not very feature rich. Provision for fan at the rear. Fan on the side panel with speed control.

Performance 5.5
Reset button is difficult to press. Smoothened edges for places your hands might reach.

Build quality 6.0
Quality of metal and fan is not very good. The overall build quality is strictly mediocre.

Value for money 6.5
It is priced quite economically at ₹1,999.

WE SAY

6.0

The monitor has good contrast ratio, but the 1600x900 resolution may disappoint those looking for a full HD monitor. Gaming on the monitor was not as great as the movies experience. There are very few video settings thanks to the 1600x900 pixel resolution. It also lacks some essential connectivity options such as the DVI connection.

6.0

The V2410 is a sturdy monitor full HD monitor which should have been priced more competitively. Gaming experience was quite pleasant but not very good while watching movies due to the poor contrast ratio and bleeding backlight. Even the cheaper GL2030 was visibly better. The pricing is not justified by the performance of the display.

6.0

Though the Brag FJ8 is a solid performer though such high performance is not a necessity on a Home Theater PC. Connectivity options are aplenty and games (at medium resolutions) can be played on this high performance rig, but its price leaves a lot to be desired. Its plastic exterior also will not go too well in the living room. Although the Brag FJ8 is high on hardware, but very high on price as well. Cheaper HTPCs can be built if playing HD videos is all you need. However, if you want a compact gaming rig for your living room, this might be it.

6.0

The Zebronic Strider is definitely not a gamer's delight as claimed by the manufacturer. It is somewhat attractive, which makes it a rare specimen in the entry-level cabinet category. Another unique feature is the removable side panel with the built-in fan. The build quality is not really good but better than many basic chassis. Priced at ₹1,999, it is a fair deal for those who are looking to build a cheap gaming PC on a low budget. You can easily find tons of options in the price bracket
