TEST CENTRE RATINGS (All Scores out of 10)

Features.....7.5
Highly customisable when it comes to performance, looks and functionality.

Performance7.5
Excellent performance across FPS games, very easy to tweak sensitivity and acceleration settings to your liking.

Build quality7.0
Good overall build quality. Scroll wheel and buttons around it could have been a little sturdier.

Value for money4.0
Definitely one of the more expensive gaming mice at ₹7,500.

Features.....6.5
Has five buttons which can be programmed easily. Provision for macro programming.

Performance7.0
Good quality receiver. Grip provided on sides. The scroll button is very hard to press.

Build quality6.0
Very nice design. The quality of plastic used and button quality are both good.

Value for money5.5
Priced at ₹4,750 it is expensive. Meant for gamers on the go.

Features.....7.5
Has inbuilt memory which memorizes settings (software not required).

Performance7.0
Good overall performance. Performs well on all surfaces. 9 out of 11 keys are programmable.

Build quality6.5
It's a palm-fit, right-handed, large mouse. Form factor similar to Roccat's Pyra.

Value for money7.0
The price of ₹5,900 is justified for pro-gaming use only.

Features.....6.0
Works on Bluetooth technology. It accepts all the multi-touch gestures.

Performance6.5
Requires hard click due to buttons at the base. Multi-touch gestures work flawlessly.

Build quality7.0
Sturdy, minimalist design. Cylindrical battery section houses two AA sized batteries.

Value for money5.0
At ₹4,000, it's expensive. Saves desk space.

WE SAY

6.5

It's a very capable gaming mouse, but comfort levels for larger mice such as this one are left to personal comfort and also, the size of your palm. Price should have been a little less, and it would be easier to recommend it for any serious gamer. As of now, there are much cheaper options that will give you the same performance and response times as this mouse.

6.5

Design wise the mouse has a lot going for it despite some of its flaws. The compact mouse is somewhat difficult to get used to. It has the similar macro functionality that you find with full fledged gaming mice such as the Kone [+]. At a price of ₹4,750, this is ideal for enthusiasts gaming regularly on their high-end gaming laptops. Those who aren't, keep safe distance.

7.0

Nine out of the eleven buttons are customisable. We recommend this mouse only for those who are into pro-gaming. You can buy this mouse at a street price of ₹3,350. Mouse is not ambidextrous. It's a little more expensive than some of the older mice such as the DeathAdder and the Diamondback.

6.0

It definitely takes time getting used to, as you no longer have anything to hold on to as you would with a mouse. Definitely not meant for gamers. It is well suited for office tasks and casual users will enjoy the experience of working with it. Don't replace your mouse with the Magic Trackpad just yet. The pricing is way off the charts even for an Apple product. We would recommend you wait till the prices drop or a better alternative comes along. Good solution if you always wanted multitouch functionality on your Mac desktops.
