

To be a Writer

Creating a professional e-book is very simple when using the right software. Software, such as E-ditor Pro, create e-books as a Windows Application. Download the trial version at [www.e-ditorial.com](http://www.e-ditorial.com). Some software, such as Active eBook Compiler, provides you with options to disable copying, and password protect your work. Password protect the book, and you can sell the password at a price. You can obtain a trial version at [www.ebookcompiler.com](http://www.ebookcompiler.com).

Some of your readers may not use Windows, so distributing your e-book in the PDF format is a better idea.

Personalise the welcome note for your e-book

e-Writer Pro, a free software lets you copy paste your work, chapter wise, and creates an e-book for you. Upload the .exe file on your personal Web site, or send it via e-mail to your friends. The reader just has to double-click the .exe file to read the book.

Install e-Writer Pro using the installer, and delete the default description of the software to insert you personalised welcome note. Click Next and enter the title of your book. Clicking Next moves you to a dialog box where you have to enter the text of your e-book chapter wise.

Enter the heading of the chapter, subtitle, and copy the text of the first chapter into

The e-book chapters appear in this manner

the text box provided. Click View if you want to see the preview, or click 'Save and add another' to add the other chapters. When you have added all the chapters, click Finalise

Paste in your e-book chapters in the above dialog box

to create your e-book. Provide the folder name where you want to save it. To view your e-book, double-click the yourbook-name.exe file in the explorer.

You can now distribute your e-book through your own Web site, or other e-book publishing Web sites. Remember that apart from the .exe file, four supporting file are also created and they have to be distributed with the .exe file.

be a plain text file, a PDF file, or an HTML file (see box 'To be a Writer'). If you have a book that's in a public domain, and wish to make it available as a free e-book, Project Gutenberg is the place to be. Project Gutenberg (<http://promo.net/pg/>) is the Internet's oldest producer of free electronic books. It is supported by hundreds of volunteers, who find public domain copies of books, turn them into e-texts and publish them.

You can volunteer to contribute e-books to Gutenberg. First, check

whether the book has already been submitted by going through a list of books at <http://www.dprice48.freemove.co.uk/GutIP.html>. You can then send a mail to [hart@pobox.com](mailto:hart@pobox.com), and inquire whether work on that book has already begun. You will be e-mailed whether that is so, and if volunteers need help working on that book. Accordingly, you can start your work. You can also refer to <http://gutenberg.net/vol/wannabe.html> for details about the volunteer process.

Other famous sites for e-books are [www.bibliomania.com](http://www.bibliomania.com) and [www.bartleby.com](http://www.bartleby.com), where you have access to tons of e-books on a wide variety of topics. Bartleby.com allows readers to submit their comments on any of the books that are available at the site, as well as opinions about different sections of the site.

Tech inscriptions

If you are interested in writing about science, science education, or current events, try Journal of Undergraduate Sciences and Engineering ([www.undergraduatejournal.org](http://www.undergraduatejournal.org)).

You can also publish your research work here.

Those knowing enough to edit and review, can join the online editorial staff, which consists of students who are well-versed enough in their specific field to give different perspectives on the various manuscripts submitted. You can send in an e-mail, specifying the post that you are interested in, to [aguloy@undergraduatejournal.org](mailto:aguloy@undergraduatejournal.org).

Journal of Young Investigators ([www.jyi.org](http://www.jyi.org)) publishes original research papers, review articles, features, letters to the editor and other content that is related to science. It covers articles on biological sciences, physical sciences, mathematics, psychology, social sciences and engineering. This site is primarily for students.

Indeed, online publishing is a great way to get your work published, whether you are an established, or an enthusiastic budding writer. There are all kinds of sites where you can publish your work—be it stories, novel, poems, research work or anything that you want to publish. So, go ahead and get started! The world is waiting!

short-stories.co.uk has a fine collection of stories, arranged in different sections
