

96

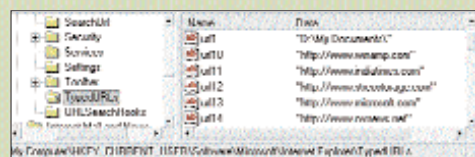

Microsoft\Windows\CurrentVersion\Explorer\RunMRU, and on the right pane, you will find entries, each one representing a cached instruction. Delete the unwanted entries, or delete all if you want to clear the cache.

Remove Logoff from Start Menu

In Windows 98, the start menu will have a Log Off button, but many users don't use it, especially in stand alone systems. To remove this button from the Start menu, go to **HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Policies\Explorer**, create a binary entry and enter its value as 01 00 00 00.

Removing typed URLs from IE address bar

Internet Explorer stores 25 URLs that were previously entered into the address bar. Click on the drop down button at the end of the address bar to view the cached URLs. To selectively remove URLs

Selectively remove cached URLs in IE

from this list go to **HKEY_CURRENT_USER\Software\Microsoft\Internet Explorer\TypedURLs**. In the right pane, you will find the list of URLs ordered with names url, url2, ...url25. Delete the entries you wish to remove. Rename the remaining entries so that the order is maintained. For example, if you delete two entries, rename the others so that they list as url1 to url23.

Remove Start menu items

Most users don't use all the items in the Start menu. Entries such as Help and Log off are sometimes never used at all. Using this tweak, you

can selectively remove items from the Start menu. Go to **HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Policies\Explorer**, and add a DWORD entry for each item you want to remove.

Here's a list of items:

'NoRecentDocsMenu' removes the Documents menu.

'NoFavoritesMenu' removes the Favourites menu.

'NoFind' removes the Find command from the Start menu.

'NoRun' removes the Run command.

'NoClose' removes the Shutdown command (be careful as it prevents you from shutting down Windows).

'NoSetTaskbar' removes the Taskbar command in the Settings sub-folder on the Start menu. Adding this entry will also prevent a user from making changes to the taskbar by right-clicking on the taskbar and selecting Properties.

In Windows 2000 and

XP, adding 'NoSMHelp' will remove the help item and 'NoCommonGroups' will remove

all the entries located in **C:\Documents and Settings\All Users\Start Menu** and its sub-folders.

After adding any entry, assign it a value of '1' to remove the item from the Start Menu, or '0' to bring it back.

Remove the Recycle bin

If you're tired of having to delete things twice and the Recycle Bin seems redundant, you can remove it. Using this tweak, you can force Windows to delete files directly—be sure

that you don't want files to be stored in the Recycle bin. Go to **HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\Explorer\BitBucket** and create a DWORD entry named 'NukeOnDelete'. Give this a value of '1' to disable the Recycle bin and '0' to enable it.

Disable recent files list in Media Player 8

Windows Media Player 8 maintains a list of files accessed recently in the File menu. Use this registry tweak to do away with that list. Open the registry and navigate to **HKEY_CURRENT_USER\Software\Microsoft\Media Player\Preferences**. Here, double click the 'AddToMRU' entry. Give this a value of '00' if you intend to disable the recent files list. You can enable it by changing the value to '01'.

Clear Add/Remove Programs list

Certain program entries do remain in the Add/Remove programs list owing to an uninstallations that go haywire. This tweak enables you to do away with those. Go to **HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Uninstall**. Under this key, you will find sub-keys for each program installed. Right-click and delete all the entries you want removed from the Add\ Remove programs list.
