1st Page 2000

1st Page 2000 (www.evrsoft.com) is a simple HTML editor with loads of features to help you create some dramatic Web sites with little effort.

Working around

The coding workspace comprises tabbed windows. By default, the Edit window is displayed, followed by the Preview and Reference panes. Click on the Reference pane to access a copy of several HTML guides, including the W3C HTML Reference.

Moding around

1st Page 2000 lets you access various modes, depending on your familiarity with the software. You are in the Easy or Normal mode, by default, when you start off for the first time. The page will show you large icons and simple controls, with all the advanced features within the respective menus. Once you

are familiar with the tools at hand, you can go to Options and switch to the Advanced or Expert mode.

Quick work

To access simple spell-checking, press **[F7]** for all textual content; use LiveSpell (**Tools > LiveSpell**) to mark out incorrectly spelled text; use the thesaurus by pressing **[Shift] + [F7]**.

Tagging

Find all assorted tag shortcuts for start, end, bold, italics, etc., under the Tag menu. Click to insert them into the HTML document. In the same menu, are the common font faces, font colours and font sizes.

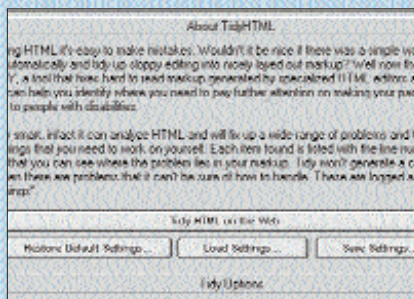

Cleaning up

TidyHTML, a nifty customisable tool that comes with 1st Page, helps you clean and tidy up your HTML code of all its errors—go to **Tools > TidyHTML Format and Fix**. Warnings are generated for

any problems that TidyHTML cannot solve.

Quick and tidy

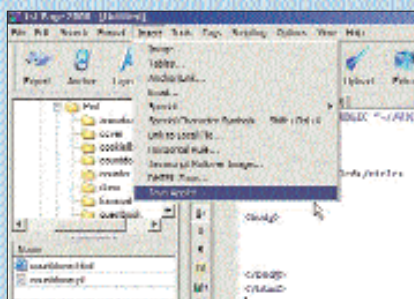

Use TidyHTML's quick-fix features (**Tools > TidyHTML Quick Tools**) to apply source-formatting, upgrade to a style sheet, or convert to XML or output tags in uppercase.

Use TidyHTML's powerful features to clean up your HTML code

Insert

The Insert menu eases the task of adding material onto the page. Whether it's adding an anchor to another Web page or another service, an e-mail link, images, tables or Java applets, etc, you can do it all. For instance, should you want to add in a

Use the Insert menu's numerous options to insert lots of little HTML code with ease

Insert > Tables..., and key in the formatting as desired.

Perls of wisdom

1st Page 2000 comes with loads of features to jazz up your Web pages. Go to **Scripting > Full Featured Perl Scripts**, and choose from countdown timers, credit card validators, etc. Your server should be running a CGI service, in case you wish to use the script.

JavaScript magic

Go to **Scripting > Instantz Scripts** to access a list of JavaScripts, such

The Instantz JavaScript wizard has lots of easy-to-use JavaScripts

as Audio Effects, Background Effects, Buttons, Calendars, Clocks, Menus, Passwords and so on; click on any of them to get further options. Choose the kind of effect you want to display, and click **Insert**. Selecting **Scripts > Commonly Used JavaScript Wizard**
