

HP Laserjet 1010 Laser Printer

Windows, please!

In our tests, the HP Laserjet 1010 performed better than the Laserjet 1015, both in terms of speed and quality. However, the test image showed prominent banding across the sheet. On the other hand, the printed text was clear and sharp.

The dimensions—37 x 23 x 20.8 cms—make it suitable for a cramped office desk. Also, weighing just under six Kg, it's more portable than most other laser printers. The 1010 has a small paper input tray, with a capacity of just 150 sheets. There's no output tray as such—the top of the printer acts as the output tray, with the help of a small detachable flap. The 1010 lacks a protective plastic cover for the paper input tray.

The printer controls, located on the top of the printer, reflect the same simplicity of design as in the 1015—in fact,

the 1010 is almost identical to the 1015, featuring the same mixed bluish grey and white shaded body. There are just two buttons, and three indicator LEDs to indicate the operational status. The printer is only compatible with Windows OSes, a big minus for the product. The package includes the driver CD, a power cord, the printer cartridge and a setup guide. The USB cable is not provided.

The Laserjet 1010 is targeted at the ultra-low-end laser printing segment. At Rs 11,000, the Laserjet 1010 is a good printing solution for the home and SoHo segments.

+ Quite affordable, simple design
- Mixed results for image quality; the test document showed prominent banding, but printed text was clear
Price: Rs 10,999

Colour Laser

Colour laser printers have been around for some time now, but haven't appealed to the SoHo segment so far because of exorbitantly high pricing. But now, it's possible to get one for as little as Rs 50,000. Colour laser printers have advantages over inkjet printers. First, colour document printing is faster. Second, it's even faster if multiple copies of the same document are printed. When quality is important, inkjets might be better, but then again, the cost per page is higher, printing takes longer, and quality may not be uniform if print volumes are larger. Colour lasers can print as many copies as needed without a drop in quality. Third, colour lasers have separate toner cartridges for each colour, so you can just change the one that runs out first.

Most entry-level colour lasers can also have a network card attached. This facilitates printing for multiple users over a network. Some others come without a network card, but with network capabilities: this means that you can plug in the card as and when it's required. You can also plug in a wireless LAN card into some colour lasers, which gives you the flexibility to place the printer at the most convenient location, without any wire clutter. Entry level colour laser printers are a good choice for printing documents that are a mix of text, graphs and images. The colour reproduction is excellent, minute details are printed excellently, and the text looks as good as when printed on an inkjet.

Unbeatable performer. Unbeatable offer.
